Tobacco Taxation Factsheet: Guinea

Population: 12.4 million Country income classification: Low-income Regional economic affiliations: Economic Community of West African States (ECOWAS)

Sources: World Bank Population Totals, 2018 and World Bank Country and Lending Groups, 2019.

Tobacco use causes more than 8 million deaths globally each year, with more than 80% of the world's smokers living in low- and middle-income countries. The cost of tobacco in West Africa, both in terms of the negative impact on public health and the economy, will continue to grow if governments do not take decisive action to limit its use. Increasing tobacco excise taxation is the most effective way to reduce tobacco consumption and improve health outcomes, while also raising government revenues. This factsheet examines the case for increasing tobacco taxation in Guinea.

Affordability

The price of a pack of cigarettes cannot be considered in isolation. Affordability measures the price of cigarettes relative to income. For example, if incomes increase faster than cigarette prices, then cigarettes are becoming more affordable. From 2008 to 2016, cigarettes became more affordable in Guinea. To have a positive public health impact, cigarettes should become less affordable over time.

Tobacco Taxation in Guinea

The total excise tax on tobacco products in Guinea accounts for only 3.9% of the average retail price. This is far below the 70% benchmark set by the World Health Organization (WHO).

There are three main reasons why the total excise tax burden is so low. Firstly, Guinea's ad valorem tax on tobacco products is 20%, which is below the minimum 50% rate set by the ECOWAS tobacco tax directive. Secondly, the ad valorem tax rate is levied on the import value/producer price, which is generally very low compared to the retail price. Therefore, any increases in the ad valorem rate will have a very small impact on the total tax charged.

Thirdly, Guinea does not levy a specific tax on tobacco products, even though this is required by the ECOWAS directive. A specific tax (per cigarette or kilogram of tobacco) is proven to be straightforward to implement and highly effective in increasing the total excise tax burden.

Recommendations

To increase the price of tobacco products – and therefore decrease tobacco consumption and the associated costs to society – the Government of Guinea should:

- Introduce a specific tax of at least 0.02 USD per cigarette and 20.00 USD per kilogram of other tobacco products, as directed by ECOWAS.
- Raise the specific tax rate at least once each year, to keep pace with increases in inflation and income.
- Levy the ad valorem tax on the retail price of tobacco products, rather than the import value/producer price.
- **Consider investing additional tax revenue raised in tobacco control** and other public health initiatives.

This factsheet is published as part of the Tobacco Tax Reform in West Africa project, a partnership between the International Centre for Tax and Development (ICTD) in the UK, the Research Unit on the Economics of Excisable Products (REEP) at the University of Cape Town in South Africa, and the Consortium pour la recherche économique et sociale (CRES) in Senegal. The project is part of the Economics of Tobacco Control Research Initiative funded by the International Development Research Centre and Cancer Research UK. **May 2020**
