# **Tobacco Taxation Factsheet: Cape Verde**

Population: 543,767

Country income classification: Lower middle-income

Regional economic affiliations: Economic Community of West African States (ECOWAS)

Sources: World Bank Population Totals, 2018 and World Bank Country and Lending Groups, 2019.

Tobacco use causes more than 8 million deaths globally each year, with more than 80% of the world's smokers living in low- and middle-income countries. The cost of tobacco in West Africa, both in terms of the negative impact on public health and the economy, will continue to grow if governments do not take decisive action to limit its use. Increasing tobacco excise taxation is the most effective way to reduce tobacco consumption and improve health outcomes, while also raising government revenues. This factsheet examines the case for increasing tobacco taxation in Cape Verde.

**Note:** All prices are for a pack of the most sold brand in each country in 2018. International purchasing power parity (PPP) is a currency conversion method that accounts for differences in purchasing power and cost of living across countries.

#### **Affordability**

The price of a pack of cigarettes cannot be considered in isolation. Affordability measures the price of cigarettes relative to income. For example, if incomes increase faster than cigarette prices, then cigarettes are becoming more affordable. From 2008 to 2018, cigarettes became more affordable in Cape Verde. To have a positive public health impact, cigarettes should become less affordable over time.

## **Tobacco Taxation in Cape Verde**

The total excise tax on tobacco products in Cape Verde accounts for only 2.7% of the average retail price. This is far below the 70% benchmark set by the World Health Organization (WHO).

There are two main reasons why the total excise tax burden is so low. Firstly, Cape Verde's ad valorem tax on tobacco products of 30% is levied on the import value/producer price, which is generally very low compared to the retail price. Therefore, any increases in the ad valorem rate will have a very small impact on the total tax charged. Secondly, Cape Verde has not historically levied a specific tax on tobacco products, even though this is required by the ECOWAS directive. A specific tax (per cigarette or kilogram of tobacco) is proven to be straightforward to implement and highly effective in increasing the total excise tax burden.

Although the Cape Verde government legislated for an increase in the ad valorem tax rate (from 30% to 50%) and the introduction of a specific tax (USD 0.01 per cigarette) in 2019, the date when these changes will be implemented is unknown.

#### Ad valorem tax

Rate charged on import value/ producer price

(Increased to 50% in 2019)

**ECOWAS** directive

#### Specific tax

Amount charged per cigarette

USD 0.00

(Tax of USD 0.01 introduced in 2019)

#### Recommendations

To increase the price of tobacco products – and therefore decrease tobacco consumption and the associated costs to society - the Government of Cape Verde should:

- Promptly implement the new specific tax and increased ad valorem tax rate that was legislated in 2019.
- Increase the specific tax to at least USD 0.02 per cigarette and USD 20.00 per kilogram of other tobacco products, as directed by ECOWAS.
- Raise the specific tax rate at least once each year, to keep pace with increases in inflation and income.
- Levy the ad valorem tax on the retail price of tobacco products, rather than the import value/ producer price.
- · Consider investing additional tax revenue raised in tobacco control and other public health initiatives.

This factsheet is published as part of the Tobacco Tax Reform in West Africa project, a partnership between the International Centre for Tax and Development (ICTD) in the UK, the Research Unit on the Economics of Excisable Products (REEP) at the University of Cape Town in South Africa, and the Consortium pour la recherche économique et sociale (CRES) in Senegal. The project is part of the Economics of Tobacco Control Research Initiative funded by the International Development Research Centre and Cancer Research UK.
