Covid-19, Conflict, and Governance Evidence Summary No.26

Siân Herbert
GSDRC & K4D, University of Birmingham
27 November 2020

This fortnightly Covid-19, Conflict, and Governance Evidence Summary aims to signpost the UK Foreign, Commonwealth and Development Office (FCDO) and other UK government departments to the latest evidence and opinions on Covid-19 (C19), to inform and support their responses.

This summary features resources on: how to understand vaccine uncertainty beyond misinformation, and how to build vaccine confidence; how citizen security and policing is changing during C19 in Mexico; and lessons from adapting sexual and gender based violence (SGBV) programming to C19.

Many of the core C19 themes continue to be covered this week, including: how C19 is increasing levels of GBV; how C19 is affecting social cohesion (this time in Iraq); and how C19 is shaping civil society (this time focusing on civil society collaboration for open government).

The summary uses two main sections – (1) literature: – this includes policy papers, academic articles, and long-form articles that go deeper than the typical blog; and (2) blogs & news articles. See the end of this report for details on the method taken for this rapid summary. It is the result of one day of work, and is thus indicative but not comprehensive of all issues or publications.
## COVID-19: Going Beyond Misinformation To Build Vaccine Confidence (plus infographics)

**Tabitha Hrynick, Santiago Ripoll & Megan Schmidt-Sane; Social Science in Humanitarian Action Platform (SSHAP); Rapid review**

How to build vaccine confidence? Drawing on literature review and expert interviews, this review finds that while vaccination levels need to reach 80-90% of the population to stem C19, this may be undermined by vaccine hesitancy ranging from minor reservations and concerns to outright refusal. Vaccine hesitancy varies substantially between countries.

While the assumption is that vaccine hesitancy is primarily driven by misinformation and this can be countered by facts, this overlooks people’s real concerns. Rumours often emerge and spread to fill knowledge gaps. Current vaccine hesitance is also driven by: the unprecedented speed of vaccine development; the ‘race’ for vaccines being politicised, deepening people’s concerns about rushed development and motives; and damaged public trust in governments, especially due to technical or policy errors in other C19 response efforts (e.g. testing, tracing). Hesitancy is often an expression of mistrust. Neglected or abused communities are less likely to trust authorities, thus inequalities create fertile ground for misinformation to thrive. Mandatory vaccination – like other coercive public health measures – and the tendency for health actors to dismiss local understanding of immunity and health, have resulted in negative consequences for vaccine confidence. The review concludes with recommendations for how to increase vaccine confidence.
Is the Coronavirus Catalyzing New Civic Collaborations for Open Government?

Abigail Bellows & Nada Zohdy; Carnegie; Paper

Is C19 catalysing new civic collaborations for open government? This report finds that C19 is spurring elite and grassroots civic actors to cooperate more, but the gulf between them remains wide. In general, civil society groups report feeling more isolated during C19. In some places, the urgency of tackling open government issues during the pandemic has helped overcome that isolation by deepening partnerships among existing networks. But in other places, those partnerships have yet to take shape, and new alliances are less likely to form. C19 has dramatically changed the operations of elite and grassroots actors alike. The impact of those changes on collaboration between the two depends on pre-existing levels of technological capacity. Although many civil society groups are struggling financially during C19, those effects are mitigated to some degree by continuing donor interest in the open government sector. It is a more dangerous time to be working on open government issues in general, and grassroots actors bear disproportionate risks in doing so. This underscores the need for more vertical alliances to mitigate civic space threats.

Moving forward, it recommends practitioners capitalise on public momentum around open governance by cultivating new elite-grassroots partnerships built on mutual respect. Donors should drive timely investment toward coalition building in places where it is missing, alongside more direct support to grassroots actors.

programmes in Haiti and Lebanon, it finds the programmes share a number of similarities, including: (i) strong community mobilisation and support; (ii) adequate and sustained funding; (iii) creative use of media and digital technology including social media (e.g. WhatsApp) to reach target populations and support frontline workers; (iv) strong and sustained partnerships and coordination to enable dissemination of messages; and (v) mainstreaming SGBV into other programmes, e.g. printing a hotline number on the back of a World Food Program card for cash distributions in Haiti, where the vast majority of beneficiaries are female.

It finds that SGBV programming across contexts differ in who delivers the intervention (e.g. fully women-led in Haiti; using social media influencers in Lebanon). And that the modality of implementation is calibrated to the contexts, including their urban and rural characteristics. In Haiti, SGBV programmes in rural areas with limited internet and phone network coverage were delivered mostly in person while following physical distancing rules, whereas in Lebanon, a more urbanised context, activities were mostly undertaken remotely, except for high risk populations.

What do people in Afghanistan think about peace, C19, and the economy? Drawing on a telephone survey of 4,300 Afghans in September to October, related to C19, this paper finds:

- Most Afghans (85%) report that they have received adequate news and information on C19.
- When asked to what extent the government has provided support to them during C19, 74% reported not at all.

23% of respondents reported that they or someone in their household had received a confirmed C19 diagnosis.

| Citizen Security and Policing Amidst COVID-19 in Mexico | Rodrigo Canales, Julia Madrazo & Jessica Zarkin; Innovations for Poverty Action; Blog | How is C19 shaping citizen security and policing in Mexico? Based on a perception survey of 1,330 people in Mexico City in June, and interviews with Mexican police forces, this blog finds:  
**A continuing gap between citizen and police perceptions during C19** – 55% of respondents have very little or no trust in the police, and 51% say that police work during a pandemic is not very or not at all essential. In contrast, 73% of police reported expanding their roles to activities deemed essential by local governments for C19 mitigation, e.g. distributing public health info, assisting with health screenings, and surveillance. As a result of more contentious activities (e.g. lockdown and decree enforcement), several departments reported receiving more insults and hostility from the community.  
**Police officers are particularly vulnerable to C19** due to their exposing them to it, and |
because 13-20% of staff are at-risk populations.

**Police work is changing, but people don’t know it** – The public were split on whether crime had increased or not since C19 started (at 45% each), with robberies and violent robberies being at the top of their concerns. In contrast, police departments a change in crime dynamics, and an increase in emergency calls that were not consistent with public perceptions. By far the biggest category that saw increases in reports was domestic violence, followed by reports of large group gatherings, then C19 emergencies.

Methodology

Due to the emerging nature of the Covid-19 crisis, this rapid weekly summary includes blogs, and news articles, in addition to policy and academic literature. The sources included are found through searches of Google and ReliefWeb with the keywords:

("COVID-19" OR "coronavirus") AND ("developing countries" OR "Africa" OR "Asia" OR "Middle East" OR "Latin America" OR "Pacific") AND ("conflict" OR "peace" OR "violence" OR "resilience" OR "fragility")

("COVID-19" OR "coronavirus") AND ("authoritarian*" OR "democracy" OR "corruption" OR "transparency" OR "state legitimacy" OR "non-state actors" OR "state capacity" OR "state authority" OR "politic*" OR "state institutions")

Plus searches of Google Scholar with the keywords:

("COVID-19" OR "coronavirus") AND ("developing countries" OR "Africa" OR "Asia" OR "Middle East" OR "Latin America" OR "Pacific")

("COVID-19" OR "coronavirus") AND ("authoritarian*" OR "democracy" OR "corruption" OR "transparency" OR "state legitimacy" OR "non-state actors" OR "state capacity" OR "state authority" OR "politic*" OR "state institutions")

The searches are restricted to articles published in the previous seven days, in English. This is complemented by: a focussed Twitter search (using just the pages of a small selection of research organisations, and key scholars/thinkers, including those funded by the UK government's FCDO; and through email recommendations from FCDO advisors and leading experts. This is trial and error approach, which will be refined and changed over the coming weeks. If you have literature to include in the weekly summary, please email – s.herbert@bham.ac.uk

Thanks to Professor Heather Marquette for expert advice.

About this report

This two-weekly COVID-19 conflict and governance evidence summary is based on 1 day of desk-based research. K4D services are provided by a consortium of leading organisations working in international development, led by the Institute of Development Studies (IDS), with Education Development Trust, Itad, University of Leeds Nuffield Centre for International Health and Development, Liverpool School of Tropical Medicine (LSTM), University of Birmingham International Development Department (IDD) and the University of Manchester Humanitarian and Conflict Response Institute (HCRI).

This evidence summary was prepared for the UK Government's Foreign, Commonwealth and Development Office (FCDO) and its partners in support of pro-poor programmes. Except where otherwise stated, it is licensed for non-commercial purposes under the terms of the Open Government Licence v3.0. K4D cannot be held responsible for errors, omissions or any consequences arising from the use of information contained in this conflict and governance evidence summary. Any views and opinions expressed do not necessarily reflect those of FCDO, K4D or any other contributing organisation.
