

The Covid Collective offers a rapid social science research response to inform decision-making on some of the most pressing Covid-19 related development challenges

The Covid Collective research platform offers rapid social science research to inform decision-making on some of the most pressing development challenges related to Covid-19. The global Covid-19 pandemic is an unprecedented crisis requiring rapid generation of policy-relevant evidence to inform decision-making as we move from crisis to recovery phase and beyond.

The Covid Collective research platform brings together the expertise of global partner organisations, coordinated by the Institute of Development Studies. The first phase of the Covid Collective ran from August 2020 to March 2022.

# Foreword

In early 2020, the world became aware of a new global threat. Covid-19 spread rapidly, upending the lives and livelihoods of people around the world. With support from the Research and Evidence Division of the UK's Foreign, Commonwealth and Development Office, we initiated a new social science research programme that focused on the impact of the pandemic called the Covid Collective.

Given the scale of the challenge, we wanted the Collective – as its name suggests – to be highly collaborative, involving effective partnerships and engagement. The purpose of the Collective is to generate research and knowledge in response to the most pressing development challenges emerging from the pandemic. This required rapid generation of policy-relevant evidence to inform decision-making, as we moved from crisis to recovery phase and beyond. We saw a need for transformations in perspective, worldview, and practice, and we believed that this could be achieved through a genuine integration of social science alongside other scientific approaches being adopted to address this global crisis.

The situation was fluid and dynamic and it is painful to look back at our project documentation and to see how the numbers of lives lost increased so dramatically: from 650,000 deaths by the end of July 2020 to 6.5m by September 2022. At the same time, we saw the enormous impact on citizens around the world as they came to terms with multiple challenges. These included citizens dealing with unpredictable policy responses, leading in turn to issues of trust in governance institutions; and the negative impacts of the pandemic on the lives and livelihoods of those people who were already experiencing marginalisation, exclusion, and a range of vulnerabilities.

Against this backdrop, the Collective initially brought together the expertise of eight global partner organisations, including and coordinated by, the Institute of Development Studies. The work was extensive, rapid,

and agile, with a growing partnership, complementary funding mechanisms, and a widening geographical and thematic spread.

Over less than two years, we have been privileged to see the initial partnership expand to 28 partners, with 56 projects in 34 countries. Along the way, there were significant challenges in carrying out research due to restrictions on movement, and a changing, dynamic situation that in some countries included outbreaks of conflict. Researchers have reflected on these challenges and important lessons are being learned and shared more widely through different forms of engagement and dialogue. They have provided important real-time evidence, data, and analysis; and generated compelling, research-based arguments and options for doing things differently in a recovery period and beyond.

The Covid Collective has in many ways confirmed a wider reality. The pandemic has created an unprecedented crisis for development with highly uncertain outcomes, affecting and requiring responses from all countries. Dominant development models are being undone, but seeds of hope are also emerging for a radical transformation of development. The Collective's research shows in multiple ways how Covid-19 is threatening livelihoods, economies, and societies. Responses are exposing, and potentially deepening, foundational cracks in society, heightening fragilities and vulnerabilities in systems of all kinds. The impact is playing out at local, national, and global scales.

Whilst the Collective's collaborators, and the many communities and organisations they work with, have helped to identify strategies and approaches to address short- and mid-term needs and challenges, they have also demonstrated that this is a time of opportunity. We are learning together about what could lead to a genuine transformation of ideas, policies, programmes, and practices. We are seeing collective urgency in fostering collaborative and comparative learning across the experience of different countries and localities; and in finding ways to avoid returning (via recovery) to conditions that do not serve us well.

We hope the examples of research in this brochure will provide evidence that a systemic transformation, even going beyond 'building forward better', is not just a possibility but should instead be a priority.

**Peter Taylor**

Director of Research at the Institute of Development Studies

**Dominant development models are being undone, but seeds of hope are also emerging for a radical transformation of development.**

# African Cities and Covid-19 – Learning and Building Knowledge: Developmental Coalitions in Informal Settlements

**KENYA, SOMALIA, UGANDA, NIGERIA**

**Lead partner**

**University of Manchester Global Development Institute (GDI)**

## Overview

This action-research project has involved three local research teams in Nairobi, Kampala, and Mogadishu who have carried out focus groups, interviews, and developed outreach activities. The objective of this research is to understand pandemic response and trace how the pandemic has disrupted the everyday life of the majority and often poor households. Moreover, the study seeks to uncover how the Covid-19 pandemic led to collective action in response to various needs, including new collaborations between various state and non-state actors.

Preliminary findings display the complex impacts and often highly inequitable burdens of national restrictions (including lockdowns), while also leading to various bottom-up responses in low-income urban areas. The majority poor households are highly dependent on informal businesses; trade and markets became restricted, sometimes overnight, with loss of income.

# African Cities and Covid-19 – Learning and Building Knowledge: Political Settlements

**KENYA, SOMALIA, UGANDA**

**Lead partner**

University of Manchester Global Development Institute (GDI)

**Overview**

Working in three African cities, the project focuses on the ways in which political settlements are influencing government policy, programming, and practice during the Covid-19 crisis. The team analyses pandemic response measures, looking at a range of interventions including health services, water, sanitation, and hygiene (WASH), quarantine measures, the protection of key workers, social protection, and economic assistance programmes.

Through a comparative analysis, the project explores what lessons can be drawn about how political settlements shape the governance variables that have been identified as critical in defining the success of the response – including state capabilities, perceived legitimacy/trust, and the ability to learn lessons from earlier health crises.

# Agile Grant for Young Researchers for Conducting Small-Scale, Focused Research on Covid-19

**BANGLADESH**

**Lead partner**

BRAC Institute for Governance and Development (BIGD)

**Overview**

The rapid accumulation of quantitative and qualitative data on the Covid-19 pandemic in Bangladesh and the broader socioeconomic and humanitarian effects of the pandemic have created a need for small-scale in-depth analysis and/or

complementary secondary or primary (qualitative) research.

This project facilitates this type of small-scale study, conducted by promising young researchers competitively selected from among the students of BIGD's Master of Development Studies (MDS) programme. In addition to providing valuable new insights, the study builds the capacity of young social science researchers and practical research capacity for the future.

# Authoritarian Responses to Covid-19: Humanitarianism and Displacement

**GLOBAL**

**Lead partner**

Institute of Development Studies (IDS)

**Research partners**

Action Aid international, World Vision International

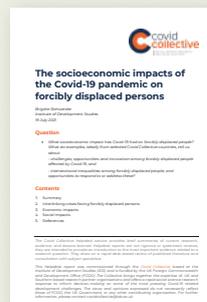

**Overview**

This project looks at the links between discrimination and marginalisation of refugees and internally displaced persons (IDPs) and authoritarianism during the Covid-19 pandemic. Using examples and cases from different global contexts, the study examines how the dynamics of marginalisation, authoritarianism, Covid responses, and international humanitarian law obligations interact at local to national scales and explores what the implications are, if any, for humanitarianism, peace, and stability in areas hosting large volumes of displaced populations.

## Challenges and Prospects of Youth Employment in Post-Covid-19 Scenarios

### BANGLADESH

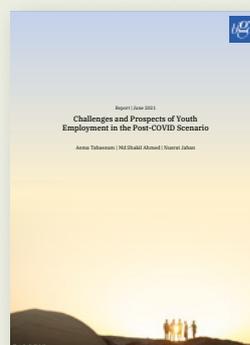

#### Lead partner

BRAC Institute for Governance and Development (BIGD)

#### Overview

This study looks at the employment challenges faced by youth in the context of the Covid-19 pandemic and suggests actionable strategies to policymakers and practitioners. The project examines how youth livelihoods have been affected, which occupations have suffered the most because of Covid-19, and which are creating new opportunities for young people. The study also tries to identify the nature of skill-development activities of the youth during the long closure of educational institutes. The study also looks at the mental health impacts on young people and how their aspirations about the future have changed.

### DEMOCRATIC REPUBLIC OF THE CONGO

#### Lead partner

African Resources Watch (AfreWatch)

#### Research partner

International Institute for Environment and Development (IIED)

#### Overview

The health impacts of the Covid-19 pandemic in the DRC have been relatively low. However, a six-month ‘lockdown’ and a slowdown in international markets has exacerbated existing poverty levels and exposed structural weaknesses in the market, social, and political economic system – leaving already vulnerable people unprotected. This research looks at the impacts and experiences of the Covid-19 pandemic on communities dependent on artisanal and small-scale (ASM) cobalt mining in the Kolwezi area of the DRC.

This is a highly politicised sector reliant on international markets, structurally intertwined with large-scale mining companies and buyers, rife with corruption, high levels of informality, low levels of food security, and significant levels of poverty-driven child labour and criminal activity.

# Covid-19 Vaccination Roll-Out in Informal Low-Income Settlements

**INDIA, MALAWI, UGANDA, ZIMBABWE**

**Lead partner**

University of Manchester Global Development Institute (GDI)

**Research partners**

ACTogether Uganda, Centre for Community Organisation and Development (CCODE), Dialogue on Shelter Trust (DoSt), Zimbabwe, Slum Dwellers International-Kenya (SDI-K), Society for the Promotion of Area Resource Centers (SPARC)

**Overview**

The objective of this study is to contribute to understanding of the vaccine roll-out in inner-city informal settlements and to help ensure equity in vaccine distribution. The project gathered data through a fortnightly survey of community leaders in inner-city settlements in major towns.

The intention behind monitoring in these areas is that they are under-served and over-crowded. Hence, they are high-risk locations with respect to Covid-19. Prioritised access to Covid-19 vaccines is therefore one of many measures needed to help.

The provision of the survey data will enable relevant local professionals and national-level advocacy groups to monitor vaccine roll-out for inner-city informal settlement residents, identify potential inequalities in access, and enable public pressure from residents' associations and grass-roots organisations to rectify this situation as required.

# Covid-19: The Changing Nature of State-Business Relations and Implications for Participation in Global Value Chains

**KENYA**

**Lead partner**

Centre for African Bio-Entrepreneurship (CABE)

**Research partner**

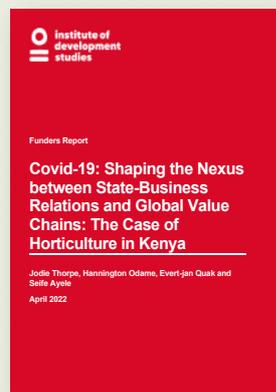

Institute of Development Studies (IDS)

**Overview**

A significant amount of global trade is conducted through an integrated system of global value chains. Trade through these value chains was already undergoing a process of reconfiguration when the global pandemic hit. This research explores how political economy, specifically domestic state-business relations (SBR) in East Africa, is influencing policy responses to Covid-19, how this response is further reshaping value chains, and the implications of these dynamics for inclusive and sustainable development.

The project identifies two sectors where businesses have experienced contrasting fortunes because of the pandemic, and analyses how policy responses to Covid-19 influenced the interests and capabilities of firms to engage with global and/or regional value chains and the role played by state-business interactions in these dynamics.

## KEY OUTPUTS

#### Overview

The study explores how the high-frequency metrics of household consumption, employment, and commercial activity can be identified, combined, and benchmarked against existing government data to provide accurate and timely information about the economy of low-income countries.

## Disability and Covid-19 in Vietnam

### VIETNAM

#### Lead partner

London School of Hygiene and Tropical Medicine (LSHTM)

#### Research partner

Hanoi University of Public Health (HUPH)

#### Overview

This research, led by the International Centre for Evidence in Disability (ICED) at the London School of Hygiene and Tropical Medicine (LSHTM) provides an additional setting in an Association of Southeast Asian Nations (ASEAN) country from which to explore the experience of people with disabilities during the pandemic.

Vietnam has been considered a model case for its successful containment of Covid-19, although the rigorous containment measures have been acknowledged to have had social and economic consequences amongst the general population. Additionally, the research is exploring the inclusion of people with disabilities in vaccine roll-out and includes a quantitative component, with a survey of people with and without disabilities in the three largest cities to triangulate findings within the qualitative research and offers comparisons of the experience between people with and without disabilities.

## European Union External Action Service and the EU's Response to Covid-19: Capacity, Agility, Effectiveness?

### GLOBAL

#### Lead partner

University of Edinburgh, PeaceRep: The Peace and Conflict Resolution Evidence Platform

#### Overview

The European Union has been active in providing assistance and humanitarian aid in developing and post-conflict areas. This project considers the internal reporting, media coverage, and social media coverage to answer the question of whether these programmes have had the capacity to deliver their intended aims while disrupted by the Covid-19 pandemic.

# Evidence to Support the Inclusion of People with Disabilities in the Covid-19 Response

## BANGLADESH, GHANA

### Lead partner

London School of Hygiene and Tropical Medicine (LSHTM)

### Research partners

BRAC Institute for Governance and Development (BIGD)

University of Ghana

### Overview

This project produces evidence and learning to support the inclusion of people with disabilities in the Covid-19 response. In-depth interviews were conducted with people with disabilities in two countries – across a range of impairments, age groups, and contexts – to examine people with disabilities’ experiences and their ideas for solutions to the challenges they are facing.

The emphasis is on understanding the needs of people with disabilities, and how the Covid-19 response can be tailored to ensure their inclusion in responses is supported by the FCDO and other agencies. The in-depth interviews with participants in the first phase of the study are repeated at six to nine months, to consider the ongoing impacts of the pandemic, and how people with disabilities can be effectively included in recovery efforts.

# Exploring the Nexus of Covid-19, Precarious Migration, and Child Labour on the Cambodian-Thai Border

## CAMBODIA, THAILAND

### Lead partner

Analyzing Development Issues Centre (ADIC)

### Research partners

Institute of Development Studies (IDS), Akphivat Neary Khmer Organization (ANKO), Aphiwat Strey

### Overview

This project investigates the impacts of the Covid-19 pandemic on Cambodian cross-border migrants and explores links between these shifting patterns of migration and the prevalence and type of child labour within this vulnerable population.

Conditions for migrant workers, both in Thailand and at home in Cambodia, have been degrading consistently since the onset of the pandemic. Government restrictions in Thailand, especially the border closure in February 2020, saw the rate of return migration to Cambodia increasing.

The interviews suggested that while not all respondents are children or respondents who engage the children to work with, there are cases of adolescents who left school due to poverty or lack of resources to support their schooling needs. This means that there is an increase in the numbers of children migrating and entering the workforce.

## KEY OUTPUTS

### MIGRATING PERILS

Covid-19 restrictions disparege Cambodian migrant workers, blurring legal status amid Thai border closures

COVID-19 border closures have disrupted the lives of Cambodian migrant workers in Thailand. The pandemic has led to a sharp decline in the number of migrants crossing the border, and those who remain are often working in precarious conditions. The closure of the border has also led to a loss of income for many migrants, who are struggling to support their families back home.

**Key points**

- Covid-19 border closures have disrupted the lives of Cambodian migrant workers in Thailand. The pandemic has led to a sharp decline in the number of migrants crossing the border, and those who remain are often working in precarious conditions. The closure of the border has also led to a loss of income for many migrants, who are struggling to support their families back home.
- Covid-19 border closures in Thailand and border closures in Cambodia have led to a loss of income for many migrants, who are struggling to support their families back home.
- Working-age children often migrate and work in precarious conditions in Thailand and Cambodia, especially in the agricultural sector. This is often due to poverty and lack of resources to support their schooling needs.
- Migrant workers are often forced to migrate through informal channels, which leaves them vulnerable to exploitation and abuse. This is especially true for women migrants, who are often working in the garment sector.

**“I have all documents to travel and work in Thailand. But because I returned in July 2021 when the border was closed, I have to travel through illegal check point with the help of maekjoi [informal brokers] to get through. My passport is no longer valid, because it was not stamped at the check point.”**

# Forgotten Agenda: Including Women with Disabilities and their SRHR Needs Under the Covid-19 Epidemic in South Africa

## SOUTH AFRICA

### Lead partner

South African Medical Research Council (SAMRC)

### Overview

This project seeks to understand the impact of the Covid-19 pandemic on young women with disabilities and without disabilities. The project follows 72 young women between 18 and 26 years (half with and half without disabilities) through the pandemic and assesses how these women experience the pandemic over time and during different lockdown levels.

This longitudinal study uses qualitative and quantitative data collection tools and Photovoice to document participants' living conditions; Covid-19 experiences; mental health; sexual and reproductive health (SRH) needs; access to services and commodities; exposure to violence, including intimate partner violence (IPV); and how these changed over time. The project also provides a platform for young women with disabilities to share their experiences in research and their daily lives during the Covid-19 pandemic.

# Governance of Equitable Access to Vaccination and Food Security for Internal Migrants in Vietnam and Laos

## LAOS, VIETNAM

### Lead partner

Institute of Development Studies (IDS)

### Research partners

Center for Creative Initiatives in Health and Population (CCIHP), Faculty of Public Health, University of Health Sciences, Lao PDR, Vietnamese National University of Agriculture (VNUA)

### Overview

This project aims to understand the governance of access to vaccination and food for internal migrants in urban and peri-urban areas in Laos and Vietnam to improve policies to ensure both effectiveness and the equity of the state's vaccination and food policies.

The research is working on four levels: (1) exploring the rationales used to explain unequal practices that exclude migrants or vulnerable people from access to health care and services; (2) identifying a fair, transparent, and inclusive response to Covid-19 which includes rural migrants in peri-urban and urban areas; (3) understanding how Covid-19 lockdown measures have affected migrants' access to healthy and nutritious food and; (4) identifying formal or informal mechanisms that might have helped migrant workers maintain access to nutritious food.

### YEMEN

#### Lead partner

Yemen Polling Centre (YPC)

#### Research partner

University of Edinburgh, PeaceRep: The Peace and Conflict Resolution Evidence Platform

#### Overview

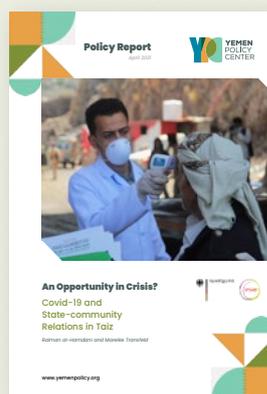

Building on an initial pilot project, this study is conducting a longer-term analysis of how the Covid-19 pandemic is impacting everyday life alongside the ongoing conflict in Yemen. With a focus on security, health response, and community actors, women, and other societal leaders, the project is conducting interviews and running an expert focus group to understand how local systems and stakeholders shape ongoing transitions and processes in conflict settings, and how Covid-19 has impacted ongoing dynamics between conflict actors and daily modalities of societal subsistence.

As an outcome, the project is providing additional indicators as to how local actors shape local systems of societal response, and how women in Yemen and local actors view the current position of the peace process in relation to the Covid-19 pandemic.

## Impact of Covid-19 on Peace Processes: South Sudan and Sudan

### SUDAN

#### Lead partner

University of Edinburgh, PeaceRep: The Peace and Conflict Resolution Evidence Platform

#### Research partner

Austrian Study Centre for Peace and Conflict Resolution (ASPR)

#### Overview

Both the Sudan and the South Sudan peace processes were at critical stages in their development when the pandemic hit, with the Sudan negotiations (Juba process) temporarily stopped, and the South Sudan peace implementation severely delayed. After more than a year of Covid-19 response, the mid-term effects of the pandemic are now possible to assess.

The project explores to what extent the Covid-19 pandemic has impacted ongoing peace negotiations in Sudan and peace process implementation in South Sudan.

## Impact of Covid-19 on People with Disabilities in India

### INDIA

#### Lead partner

London School of Hygiene and Tropical Medicine (LSHTM)

#### Research partners

Indian Institute of Public Health (IIPH), Hyderabad, Public Health Foundation India (PHFI)

#### Overview

This research explores the experiences of people with disabilities in India during the Covid-19 pandemic, including their inclusion in response measures. It supports the Indian government, the FCDO, and other actors' responses to Covid-19 in real time.

The project complements research already being supported by the Covid Collective in Bangladesh, Ghana, Vietnam, and Turkey. Data are being reviewed across all locations to analyse patterns and it is being used to develop guidance on the meaningful inclusion of people with disabilities in future epidemics and emergencies.

## Impact of Covid-19 on Small and Medium Enterprises (SMEs)

### BANGLADESH

#### Lead partner

BRAC Institute for Governance and Development (BIGD)

#### Research partner

Monash University

#### Overview

One of two studies building on existing survey work to collect high-frequency longitudinal data to identify trends and inform effective intervention design for vulnerable groups economically affected by the Covid-19 pandemic.

This study focuses on the impact of Covid-19 on small and medium enterprises (SMEs), their access to government support, coping mechanisms, and needs.

## Informality and Trust in Times of Covid-19

### PAKISTAN

#### Lead partner

Institute of Development Studies (IDS)

#### Research partners

Lahore University of Management Sciences (LUMS), Akhuwat, HomeNet, Kashf

#### Overview

The project looks at how states have engaged with informal economies and workers during the Covid-19 pandemic, how informality has affected workers' access to crisis support, and how these outcomes have affected state-society relationships and the underlying accountability processes. In particular, the project is examining the role of trust between informal workers and state institutions and how differences such as gender, profession, and previous interaction with state institutions have affected engagement with state policies during the pandemic, as well as gender relations within households.

Focusing on four sectors – domestic workers, market vendors, transport workers, and home-based manufacturing – the study provides useful guidance for policymakers on areas such as the inclusiveness and effectiveness of crisis support, and willingness to participate in state-led vaccination initiatives.

Humanitarianism and Covid-19: Structural Dilemmas, Fault Lines, and New Perspectives

## Innovative Network Mapping of Post-Coup Governance in the Pandemic

### MYANMAR

#### Lead partner

University of Edinburgh, PeaceRep: The Peace and Conflict Resolution Evidence Platform

#### Overview

This project is designing a way to track the fast-changing permutations of actors and new institutions being created in Myanmar to support understanding of how these new constellations of actors and competing structures of 'interim governance' are impacting on Covid-19 operations.

The project supports international country teams in the design of constructive interventions and enables better understanding of their different positions and capacity for support – for both Covid-19 relief and for addressing other ongoing health issues.

## Intercultural Communication for Effective Covid-19 Response in Amazonian Indigenous Territories

### BRAZIL

#### Lead partner

Associação Saúde Sem Limites (SSL)

#### Research partner

Institute of Development Studies (IDS)

#### Overview

This action-research study identifies the key barriers to effective communication between government health services and Amazonian indigenous communities who have been found to be particularly vulnerable to Covid-19, and translates the findings into a proof-of-concept design for improved intercultural communication strategies for ensuring (1) access to reliable information on Covid-19 prevention and treatment, and (2) trust and cooperation between communities and non-indigenous health professionals for contact tracing, referral and response monitoring and social accountability.

The project is producing a scalable support platform and accessible guidance materials appropriate for use with indigenous people elsewhere in Brazil and beyond.

## Investigating Covid-19 Education Policy Response in Ghana

# Leaving No One Behind in Digital Delivery of Public Services

## INDIA, PERU, TANZANIA

### Lead partner

Southern Voice

### Research partners

CBGA, India, IEP, Peru, STIPRO, Tanzania

### Overview

The project is generating evidence of how rapid digitalisation of public service delivery due to the pandemic has shaped the lives of those already living in exclusion, especially women. Southern Voice's project is generating evidence on this in three countries – India, Peru, and Tanzania. It examines the extent to which digital policies and practices are increasing inequalities among women and limiting the fulfilment of their economic and social rights.

The aim is to give those working on issues of digital access, at the country and global level, evidence on interventions and practical insights. These can be used for policy reform and global cooperation, ultimately reducing the gender technological divide.

Learn more about Southern Voice's work on the impact of the Covid-19 pandemic in the global South from the [website](#).

### Lead partner

Overseas Development Institute (ODI), Chronic Poverty Advisory Network (CPAN)

### Research partners

Centre for Development Research, University of Malawi, Institute of Environmental Studies, University of Zimbabwe, Institute of Social and Economic Research, University of Zambia, National Council of Applied Economic Research (NCAER), Cambodia Development Research Institute (CDRI)

### Overview

This Covid Collective grant supports the Overseas Development Institute (ODI) to expand poverty monitoring activities of its Chronic Poverty Advisory Network (CPAN) into seven new countries to provide near real-time qualitative data on how the pandemic, and the response to it, intersects with wider efforts to address poverty and inequality.

The research captures the lived experiences of the poor and vulnerable non-poor groups as the pandemic progresses, with the objective of increasing representation of their interests in programme and policy responses. The team produces the Covid-19 Poverty Monitor, a regular bulletin sharing the ongoing social and economic impacts of the Covid-19 pandemic on the poorest and those at risk of impoverishment, and the policies needed to mitigate them. Explore the research by country or sign up to CPAN's newsletter for updates.

## Reintegration of Failed Migrants

**BANGLADESH**

### Lead partner

BRAC Institute for Governance and Development (BIGD)

### Overview

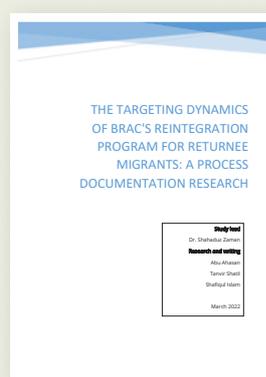

Previous research shows that as many as a third of migration attempts in Bangladesh are ending in failure, with large financial losses for the households concerned. The Covid-19 pandemic has further exacerbated these trends, with an estimated two million migrant workers expected to return due to the pandemic-induced recession. The rehabilitation and reintegration into the economy of this influx of return migrants is thus becoming a pressing concern for the country.

This study provides a qualitative assessment of the needs of migrant workers involuntarily repatriated due to the pandemic, as well as the likelihood of unsafe re-migration in this population. A special focus of the qualitative study is on female returnees, who face additional sociocultural obstacles to reintegration.

# Resilience of the Ultra-Poor People in the Face of Covid-19

## BANGLADESH

### Lead partner

BRAC Institute for Governance and Development (BIGD)

### Research partner

London School of Economics and Political Science (LSE)

### Overview

One of two studies building on existing survey work to collect high-frequency longitudinal data to identify trends and inform effective intervention design for vulnerable groups economically affected by the Covid-19 pandemic in Bangladesh. This study focuses on those who previously escaped extreme poverty through BRAC's ultra-poor graduation (UPG) programme and tries to understand the factors, for example, the nature of occupation, that make them economically resilient against shocks such as Covid-19.

## KEY OUTPUTS

**Building the Resilience of the Poor through Graduation in the Post-COVID-19 Global Context**  
September 2020

The health shock brought on by the spread of COVID-19, coupled with the economic crisis brought by global lockdown measures, has had an immediate and severe impact on the lives of the ultra-poor. Millions of people are experiencing vulnerability and financial insecurity due to the impact of the pandemic.

The World Bank estimates that 70 million to 100 million people will see the nature of their economic situation by the end of 2020. The number of ultra-poor living in extreme poverty will increase, and will be concentrated in countries with high existing levels of extreme poverty. Almost half of those projected to fall into extreme poverty live in South Asia, and more than a third live in Sub-Saharan Africa.

This crisis has also exacerbated existing issues faced by people living in extreme poverty in both rural and urban areas. In rural areas, where the ultra-poor often live, the impact of the pandemic is particularly affected by the loss of income, reduced opportunities for employment, and reduced access to health services and education. In urban areas, the ultra-poor face reduced access to health services, and are often living in crowded and informal settlements, which are particularly vulnerable to the spread of the virus. The health consequences are likely to be exacerbated by limited access to basic services like water, electricity, and sanitation. The health consequences and loss of income in the ultra-poor population of the pandemic, the results of a study of migration from other sources to avoid them. Without long-term interventions for economic recovery, those who are already vulnerable risk becoming more deeply entrenched in extreme poverty.

The severe impact of the current crisis demonstrates the urgent need for a global policy response that reduces the scale of the challenge and mitigates shocks on the horizon. The global community must take action to ensure the poor have the resources and support they need to begin a path toward economic recovery and build economic resilience to prevent future shocks.

Graduation is a proven approach to strengthen the economic resilience of the ultra-poor and improve their living standards. It provides a pathway to escape extreme poverty and avoid being trapped in chronic poverty. Through coaching and training, participants enhance their human capabilities and financial literacy, develop their assets, and diversify their income sources to build their resilience. Graduation programmes also provide through to local financial service providers, which encourages them to build their savings and provide their savings more easily, achieve credit, and engage in health services, participate in improved their social well-being and enhance their ability to respond to unanticipated household shocks.

# Responding to Covid: Identifying Transformative Urban Pathways

## ZIMBABWE

### Lead partner

Dialogue on Shelter Trust (DoSt), Zimbabwe

### Research partner

International Institute for Environment and Development (IIED)

### Overview

In Zimbabwe, many households depend on informal employment and live in crowded settlements with unreliable, shared access to water and sanitation. DoSt have identified an opportunity to incorporate a 'people-centred slum upgrade protocol' in Zimbabwe's pending national development plan (2021–2025). If the protocol is incorporated into the national development plan, Zimbabweans are likely to mobilise funding more readily to upgrade informal settlements, with the potential to address Covid-19-related risks and support equitable urban development pathways.

To support this process, the project is conducting a detailed case study analysis of community-led responses to the Covid-19 pandemic in Zimbabwe, including efforts around the National Development Policy. The project is documenting local responses and government interventions, undertaking a comparative analysis of Covid-19 responses and synthesising insights from Zimbabwe and Kenya.

## KEY OUTPUTS

**SOCIAL DEVELOPMENT AND INCLUSION**  
The Disproportionate Response to Covid-19 in Informal Urban Settlements

In the early stages of the Covid-19 outbreak, much attention was paid to the health risks in informal settlements, but it is clear that the impact of the pandemic is far-reaching. The health risks are not the only concern, as the pandemic has also had a significant impact on the economic and social well-being of the ultra-poor. The impact of the pandemic is particularly severe for the ultra-poor, who are often living in crowded and informal settlements, which are particularly vulnerable to the spread of the virus. The health consequences are likely to be exacerbated by limited access to basic services like water, electricity, and sanitation. The health consequences and loss of income in the ultra-poor population of the pandemic, the results of a study of migration from other sources to avoid them. Without long-term interventions for economic recovery, those who are already vulnerable risk becoming more deeply entrenched in extreme poverty.

# Rohingya Youth Action Research in Cox's Bazar Camps: Covid-19 and Everyday Conflict Resolution

## BANGLADESH

### Lead partner

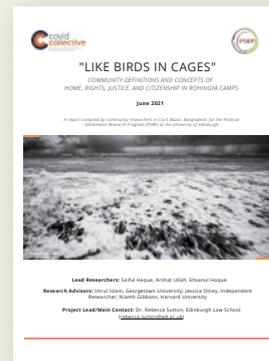

University of Edinburgh, PeaceRep: The Peace and Conflict Resolution Evidence Platform

### Overview

There is a significant number of international agencies present on the ground in Cox's Bazar, Bangladesh, delivering humanitarian services and engaging in protection-related activities with Rohingya communities living in the camps. To date, there has been minimal effort to build the capacity of displaced Rohingya so that they have adequate legal literacy to understand and articulate the challenges they are facing. Training youth in basic research skills is also not addressed, which hampers the ability of young Rohingya to identify and communicate their own and their fellow camp residents' needs.

The Rohingya Youth Action Research Project is working to remedy this problem, training and supporting locally based research teams in Cox's Bazar to produce research on community needs during the Covid-19 pandemic.

# Strategies and Policy Supports to Increase Resilience for Poor and Vulnerable Women and Youth Facing the Addition of Covid-19 to Afghanistan's Multiple Pre-existing Crises

## AFGHANISTAN

### Lead partner

Afghanistan Research and Evaluation Unit (AREU)

### Research partner

Overseas Development Institute (ODI), Chronic Poverty Advisory Network (CPAN)

### Overview

This project seeks to explore poverty dynamics and inclusive governance in the context of the Covid-19 pandemic, conflict, and significant return of labour migrants from Iran and Pakistan. In particular, the project is focusing on three key aspects.

Firstly, it examines how the Covid-19 pandemic has affected labour market precarity and livelihood stability for young women and men – how have they coped (differentially) and what types of collective action and sources of resilience have they employed? Secondly, the project looks at how the state has repositioned itself in terms of the provision of health services and economic packages to respond to the pandemic. And finally, the project explores how opposition armed groups' legitimacy strategies have changed, for example, through public health policies, humanitarian aid, and economic measures.

## Strengthening Advocacy and Mobilisation on the Frontlines: Action-Research to Address Covid-Related and Other Risks in Mathare, Nairobi

### KENYA

#### Lead partners

Mathare Social Justice Centre (MSJC)

Slum Dwellers International-Kenya (SDI-K)

#### Research partner

International Institute for Environment and Development (IIED)

#### Overview

Many residents of informal settlements, such as Mathare in Nairobi, struggle to observe Covid-19 social distancing measures and face increasingly precarious livelihoods alongside escalating care burdens, inadequate health-care access, and deepening political exclusion.

This project uses action-research methods to analyse grassroots-led Covid-19 responses in Nairobi's informal settlements and supports community mobilisation and advocacy. The projects are creating co-produced knowledge on risks and grass-roots responses that can foster mutual learning and facilitate exchanges with other grass-roots organisations, leading to more equitable and inclusive governance in the city. The findings are informing advocacy for a Special Planning Area (SPA) in Mathare, building on recent experience of similar multisectoral action research.

## The Governance Response to Covid-19 in Lilongwe, Malawi: A Political Settlements Approach

### MALAWI

#### Lead partner

Development Management Associates

#### Research partner

University of Manchester, Global Development Institute (GDI)

#### Overview

This study identifies and tracks a menu of government responses to the pandemic in Malawi including health services, health information, WASH services, key worker protection, social distancing, and social protection measures. It analyses the governance of these services, including who is responsible for providing them and what decision-making, accountability, and conflict-resolution arrangements prevail.

Findings are linked to an analysis of the evolving political settlement in Malawi. These enable a better understanding of how traditionally marginalised populations in informal settlements are incorporated or not within national political settlements, and the impact this has on governance response. By tracking and analysing these responses, the study is helping to better inform collective action around global challenges, especially pandemic response, and preparedness.

# The Impacts of Covid-19 on Trafficking and Child Labour in Myanmar, Cambodia, and Vietnam

## CAMBODIA, MYANMAR, VIETNAM

### Lead partner

Humanity Research Consultancy

### Research partner

Institute of Development Studies (IDS)

### Overview

The project looks at the impact of the Covid-19 pandemic on the survivors of trafficking and children in the worst forms of child labour in Cambodia, Myanmar, and Vietnam.

The project provides important and timely evidence on how crises such as the Covid-19 pandemic intersect with and exacerbate factors that drive vulnerability to trafficking and modern slavery. This evidence base is supporting strategic decision-making for donors, policy advocates, non-governmental organisations (NGOs), and humanitarian agencies working to support child rights and child protection as they look for ways to reduce vulnerabilities during crises.

## Understanding the Impact of Covid-19 on Asian Health and Care Worker Migration to Support Older People Care

CHINA, JAPAN, SINGAPORE, SOUTH KOREA, TAIWAN, INDONESIA, MALAYSIA, THE PHILIPPINES, SRI LANKA, THAILAND, AND VIETNAM

### Lead partner

Center for Global Development (CGD)

### Research partner

GaneshAid

### Overview

This research is working towards a better understanding of the patterns of health and care worker migration for older people care throughout Asia, and the potential for expanding ethical and sustainable migration pathways.

Working in partnership with local researchers and the Asian Development Bank, the Center for Global Development (CGD) is undertaking research and outreach to understand these factors and present policy recommendations to relevant governments and stakeholders. In doing so, the project is building on CGD's experience in building ethical, sustainable, and mutually beneficial migration programmes, responding to the Covid-19 pandemic, and improving health systems overall.

## Understanding the Impacts of Covid-19 in Fragile and Conflict Affected Regions: A Case Study of Northern Kenya

### KENYA

### Lead partner

IMPACT Trust Kenya

### Research partner

Pastoralists Alliance for Resilience and Adaptation in Northern Rangelands (PARAN Alliance)

### Overview

The project aims to investigate the impacts of Covid-19 responses on conflict dynamics in fragile and conflict-affected regions, to document examples of conflict-sensitive Covid-19 responses that contribute to peace-building, and to collate lessons learned to inform practice, policy, and decision-making in northern Kenya, as well as in other contexts and during future crises.

The project team collects data on Covid-19 responses and conflict dynamics in northern Kenya by working in collaboration with the Pastoralists Alliance for Resilience and Adaptation in Northern Rangelands (PARAN Alliance). IMPACT is using the data generated to produce new guidance for local county governments on conflict-sensitive responses to future crises and to disseminate project findings through policy briefs and webinars, targeting international policymakers and practitioners working in the field.

## Voices from the Margins and Inclusive Policy Responses to Covid-19 Pandemic

### BANGLADESH

### Lead partner

Centre for Peace and Justice

### Overview

The project aims to inform and influence public policies and state responses on Covid-19-related relief, recovery, and resilience measures in Bangladesh, based on a representative household panel survey of marginalised groups. These groups consist of citizens at the margins of power and influence whose voices and agency are barely represented in policymaking spaces and processes. Moreover, an 'interactive web-based dashboard' has been established that uses empirical evidence and reporting of perceptions and feedbacks from marginalised groups. Alongside this is an innovative platform called 'Policy Clinic' which is being accommodated periodically to validate evidence and to identify appropriate policy responses.

The project builds on and complements other recent research initiatives that seek to understand the impact of the Covid-19 pandemic on communities at the margins through the lens of humanitarian responses.
