

Institute of Policy Analysis and Research - Rwanda

Reduce Child Mortality & Improve Maternal Health

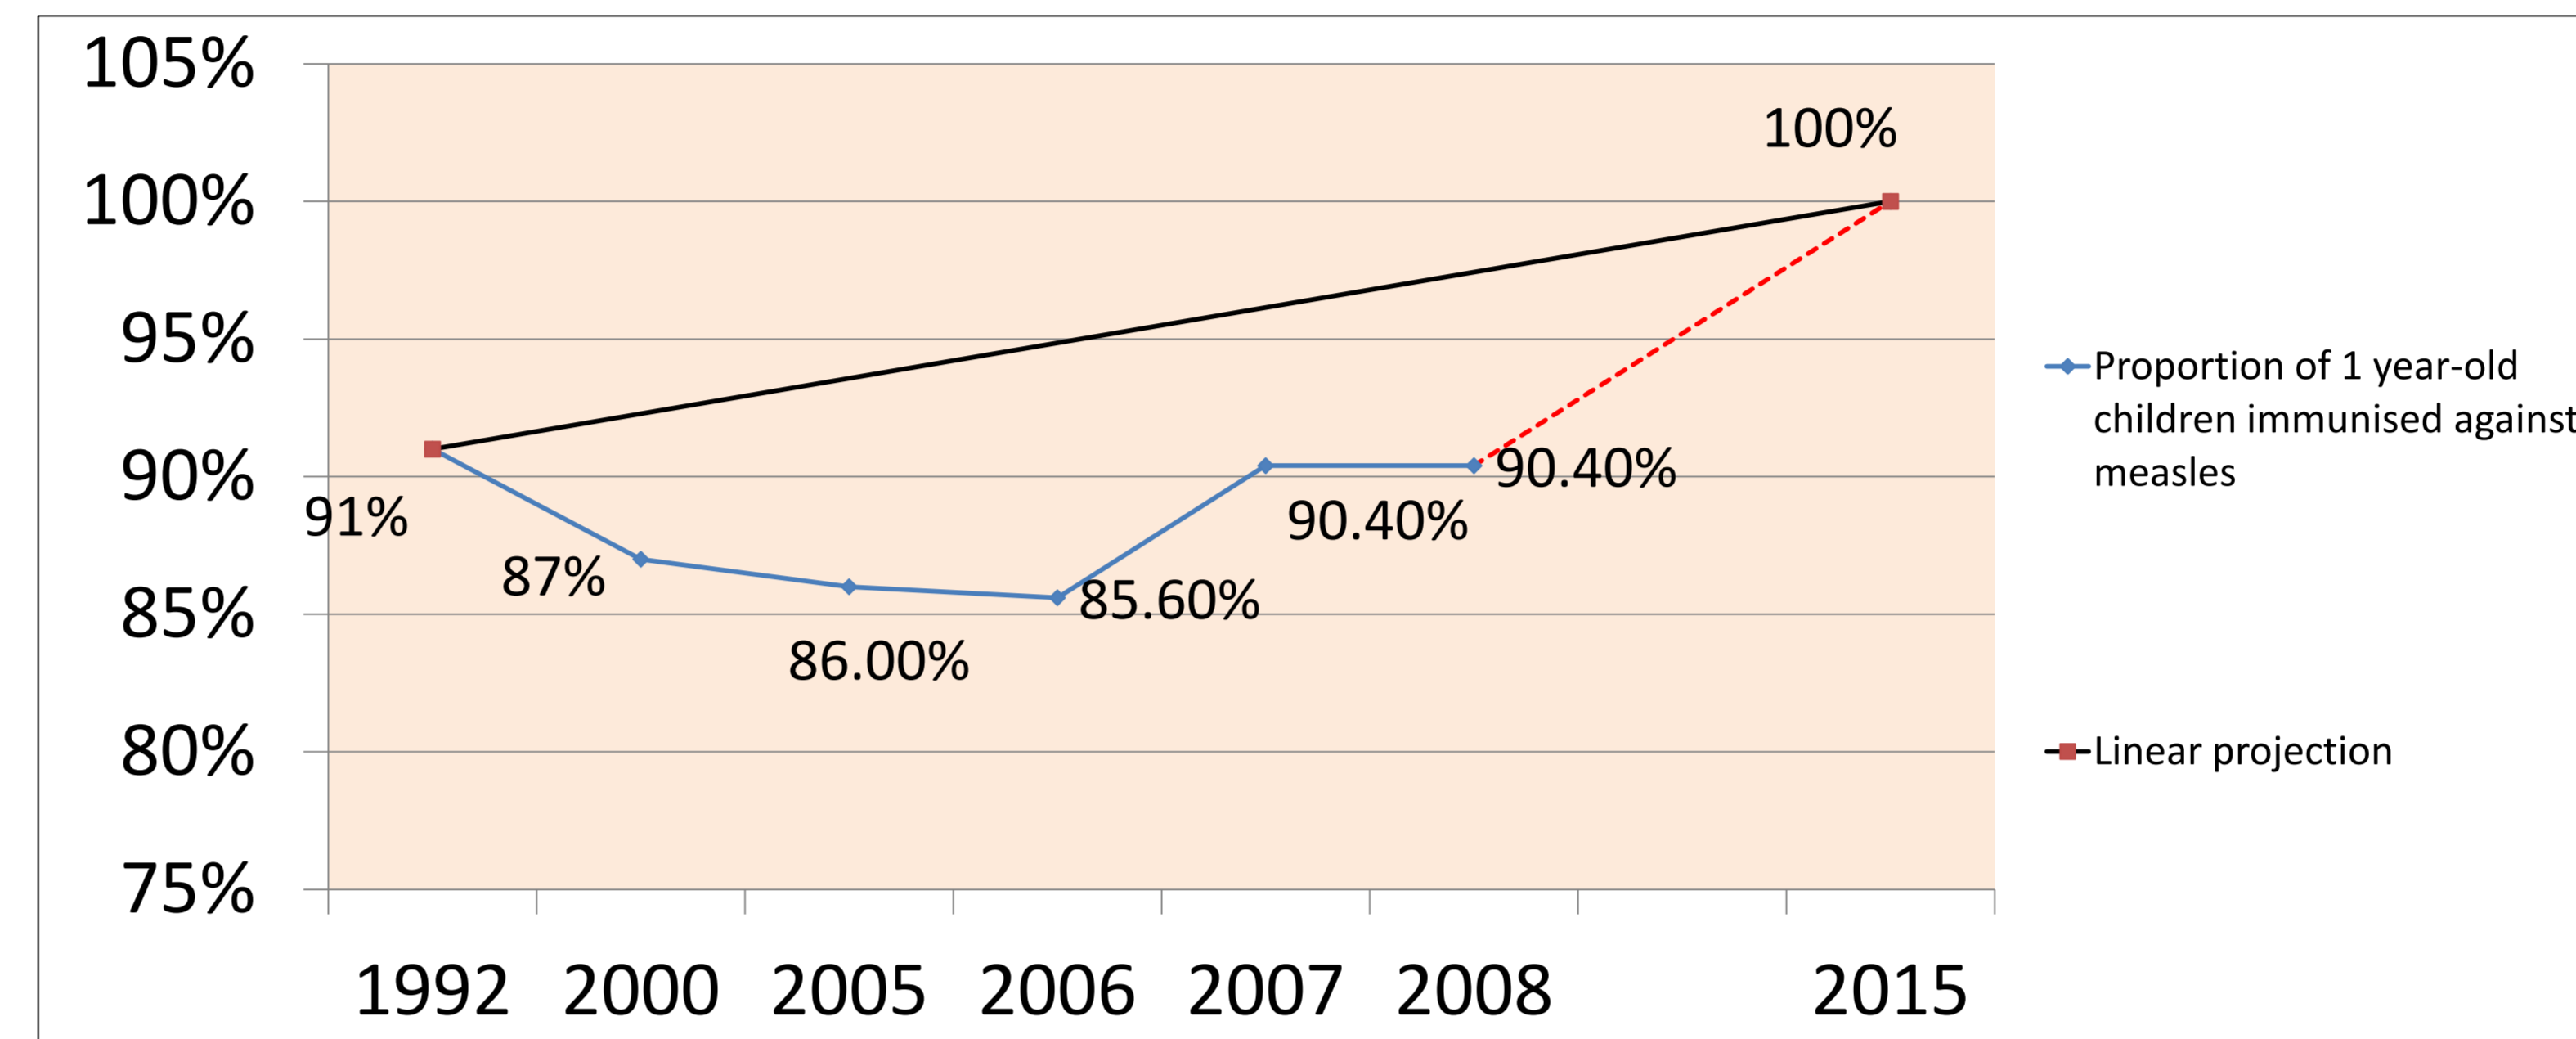

Goal 4: Reduce Child Mortality

Target 1. Reduce by Two Thirds the Mortality Rate among Children Under Five Years

Status at a Glance: Potential to be Achieved

Over 1000 Babies born in 2008, 62 died before their first birthday, while adequate care and good environment could have saved most of them. To maintain the decline witnessed since 2000 for both infant and under 5, will required continued and coordinated efforts

Proportion of One-Year-Old Children Immunised Against Measles

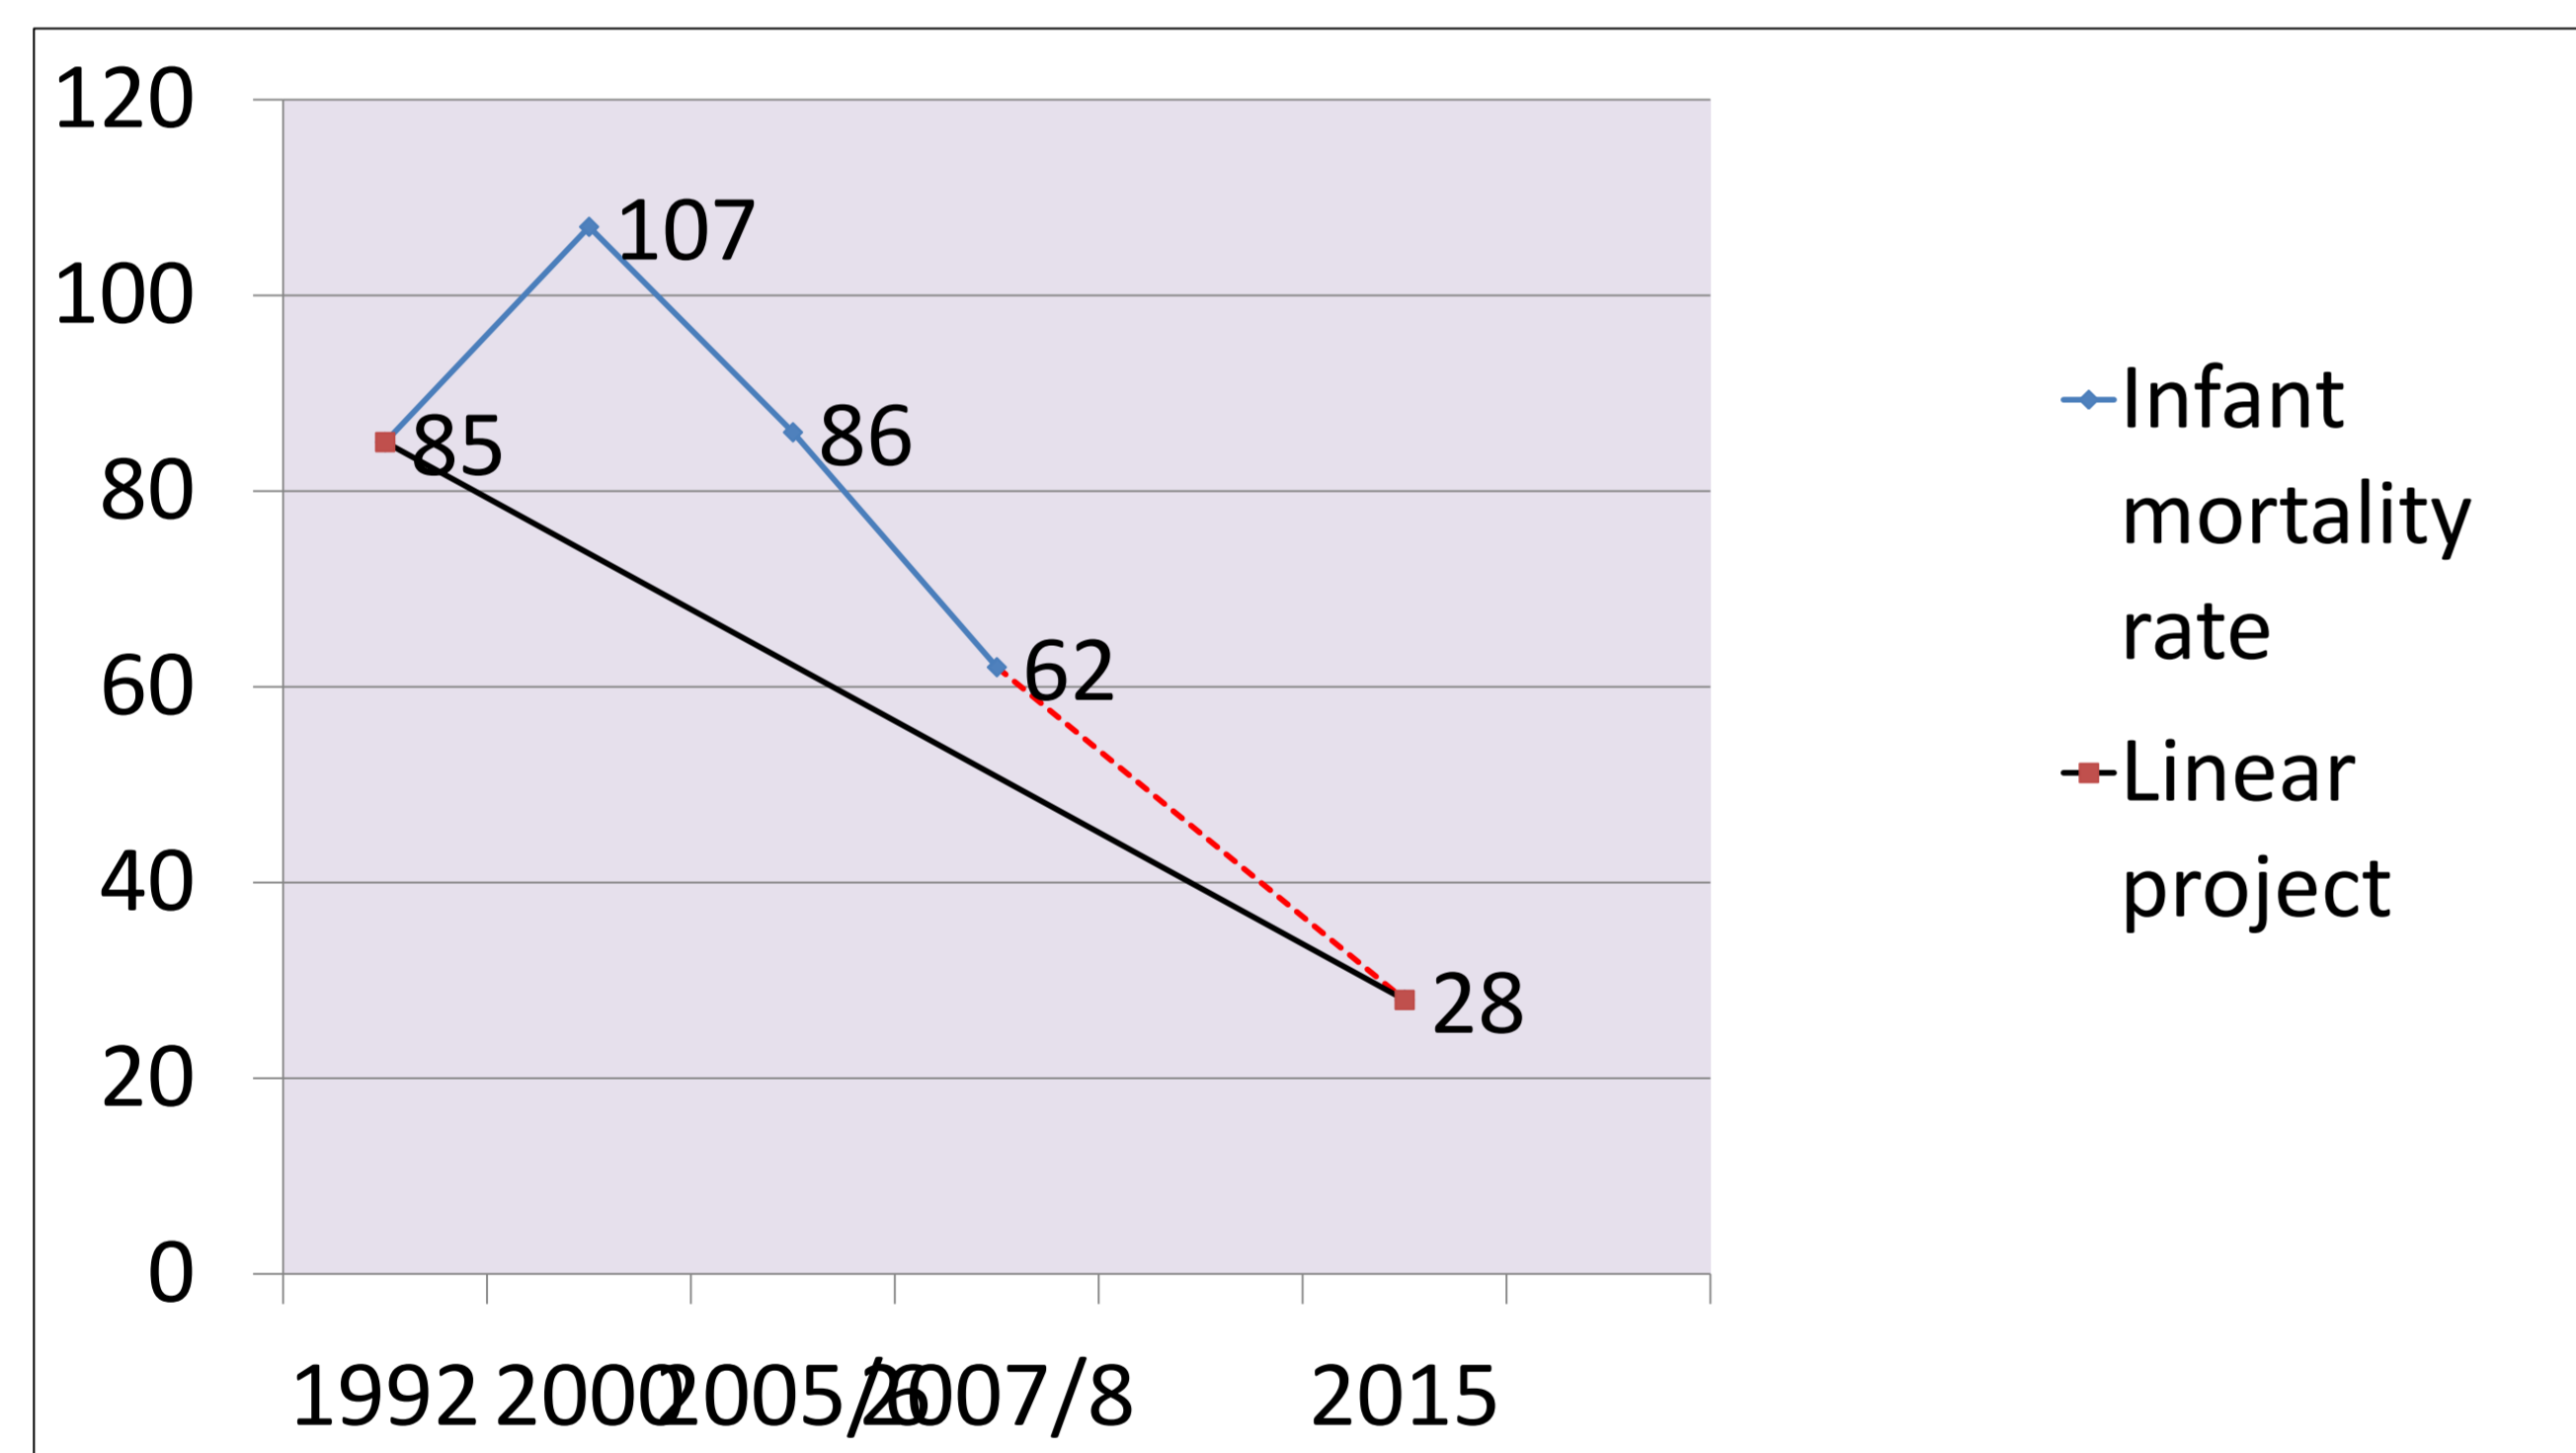

Goal 5: Improve Maternal Health

Target . Reduce by Two Thirds the Maternal Mortality Rate

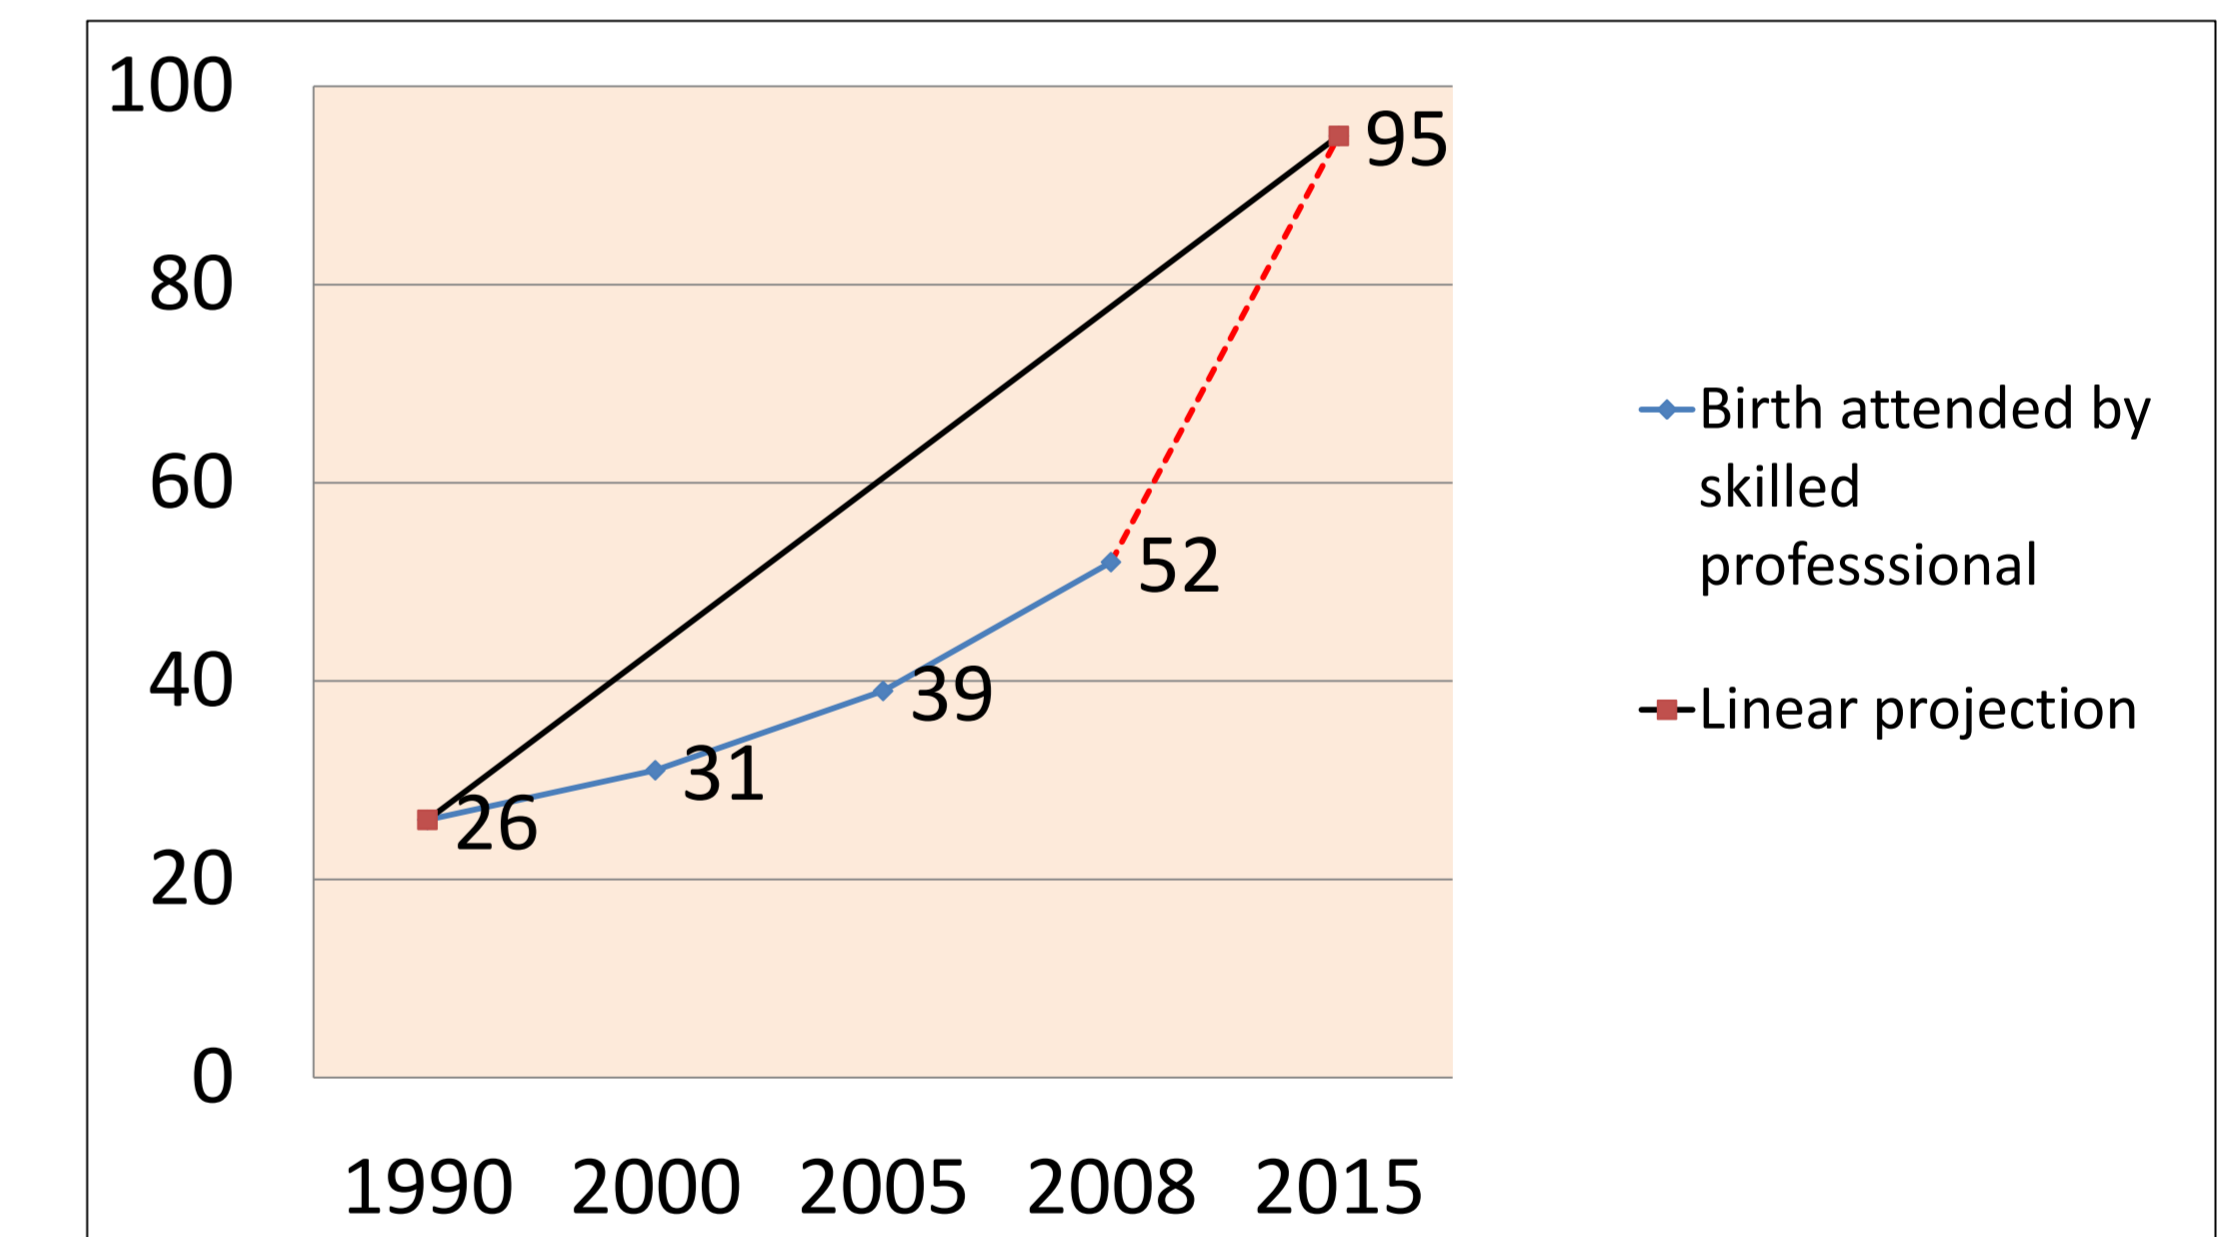

Status at a Glance: Unlikely to be achieved

This target still proves challenging to Rwanda despite great efforts that is being made. To meet the Target it would be necessary to have around 90 percent of mothers deliver in a health centre(at present just around half of mothers deliver in a health centre) and increase the uptake of the modern contraceptives

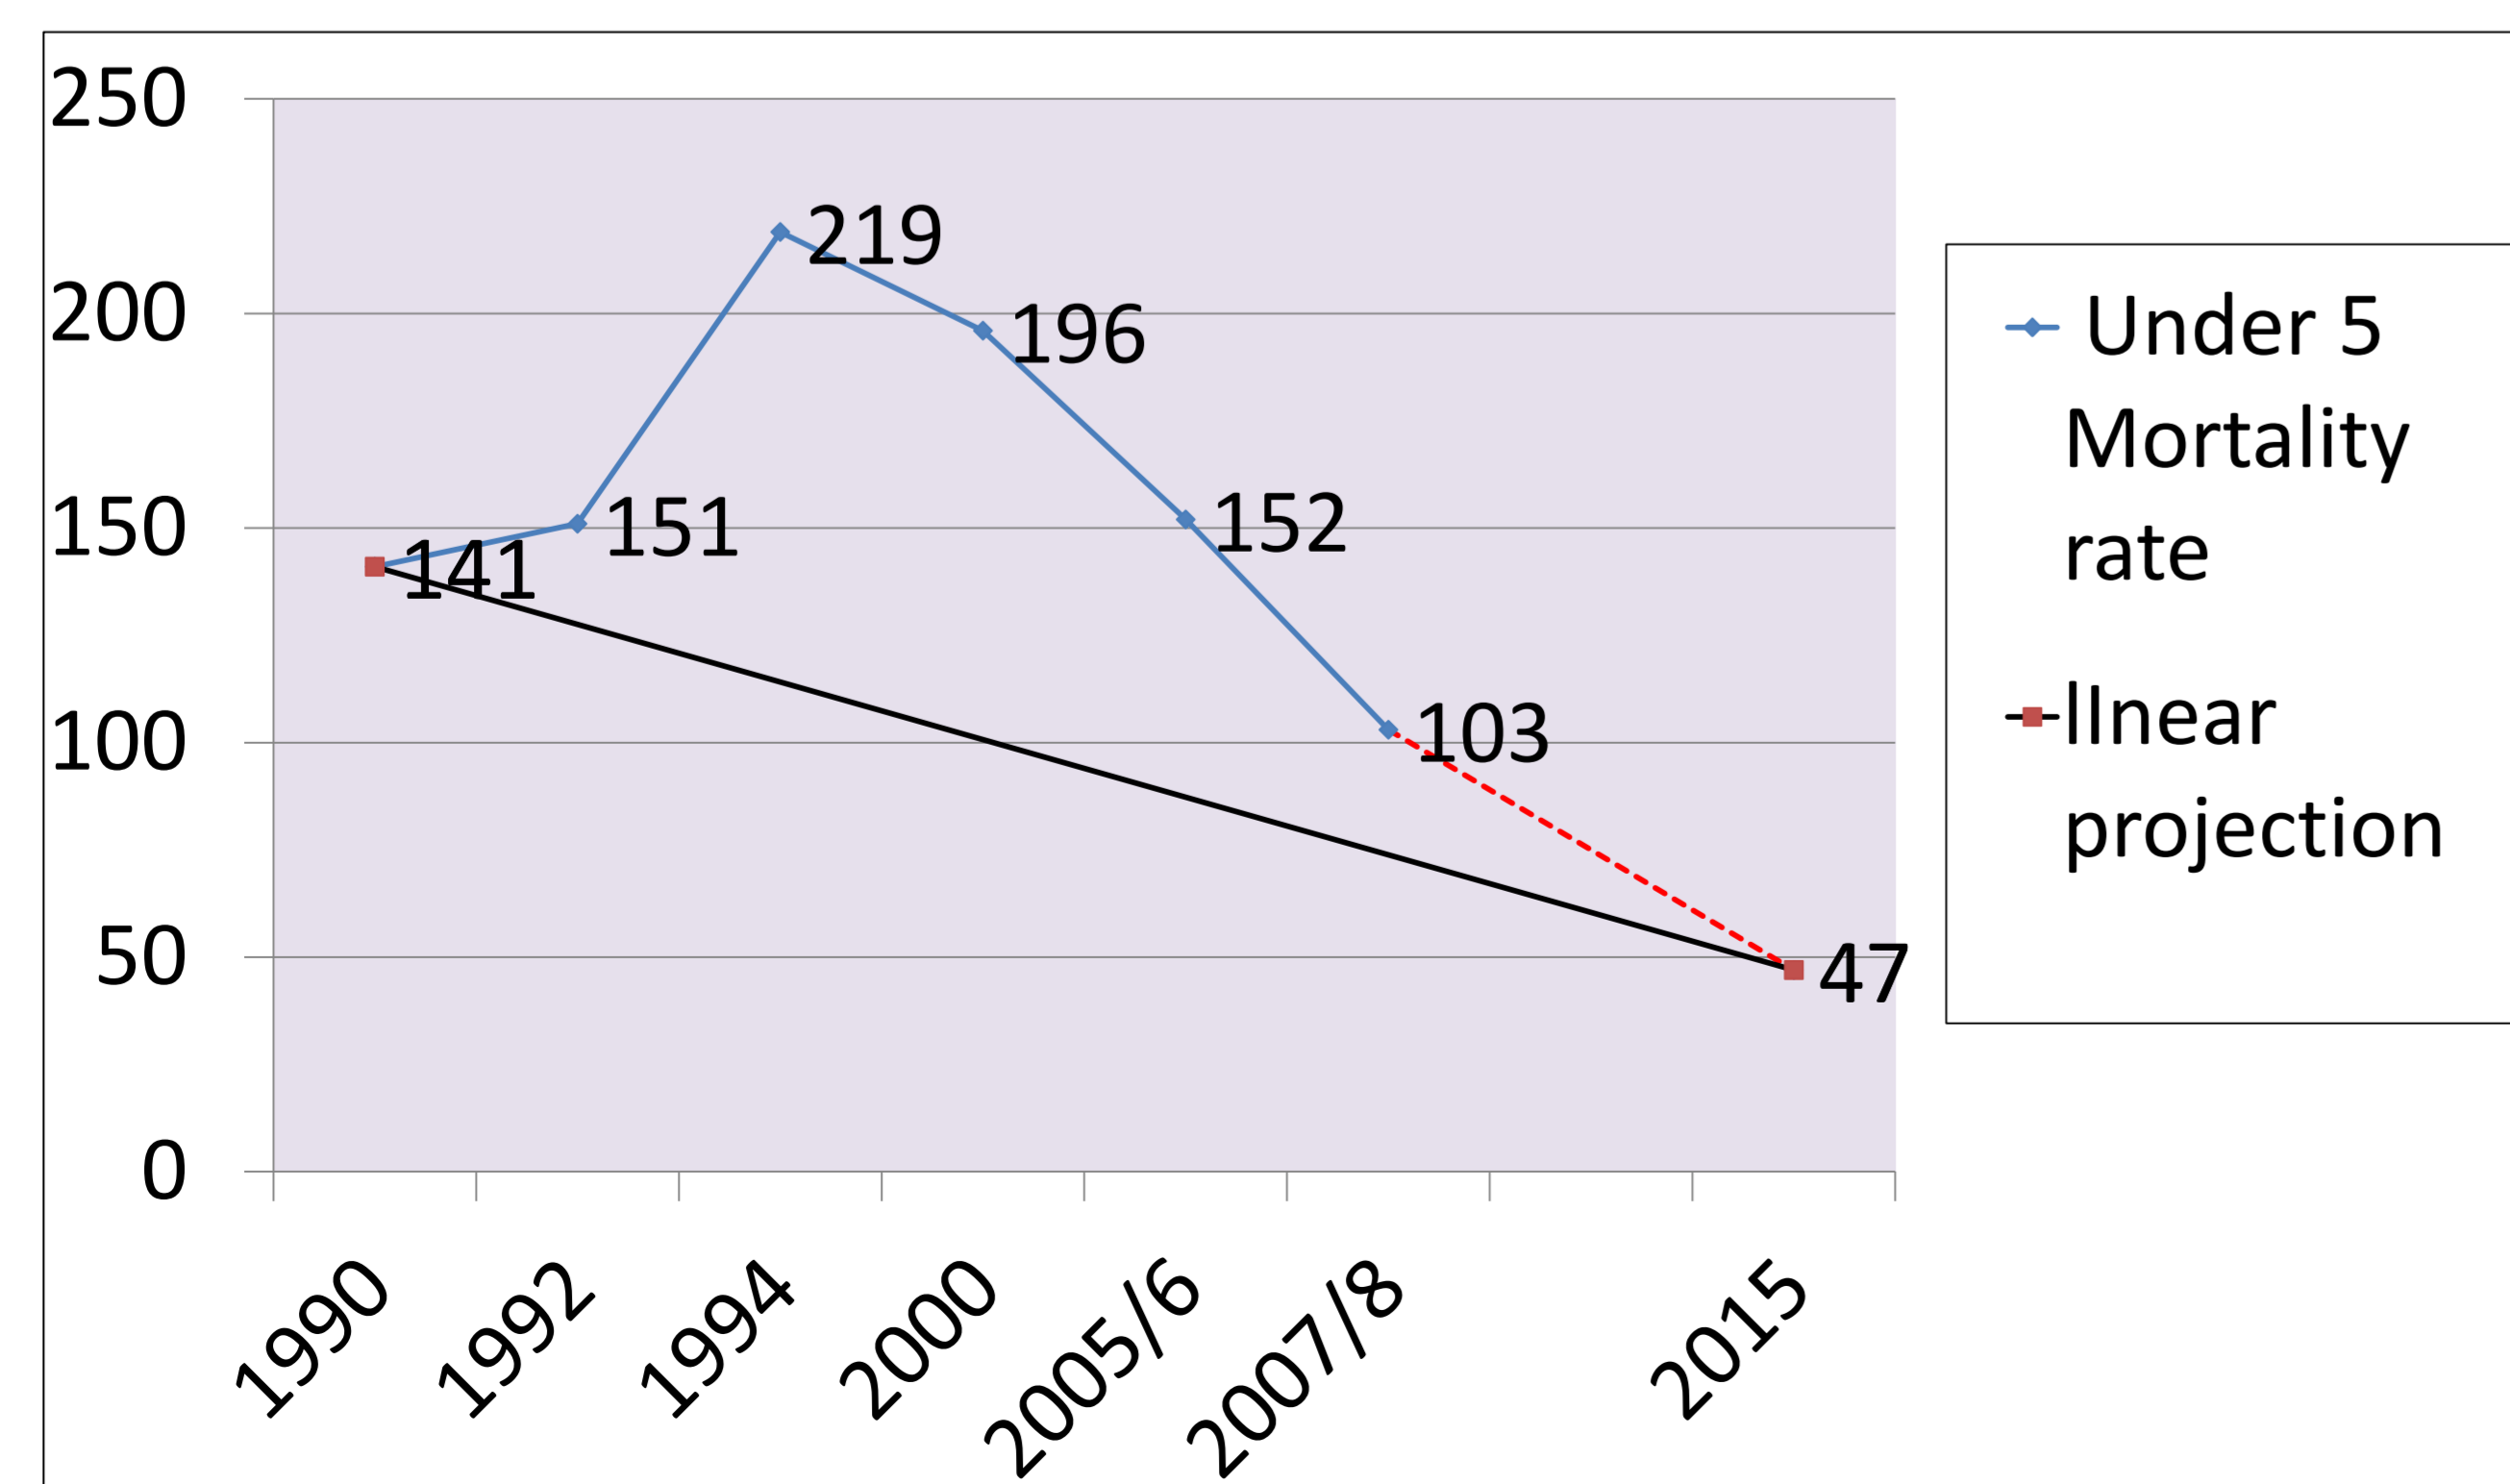

Infant Mortality Rate per 1000 Live Births

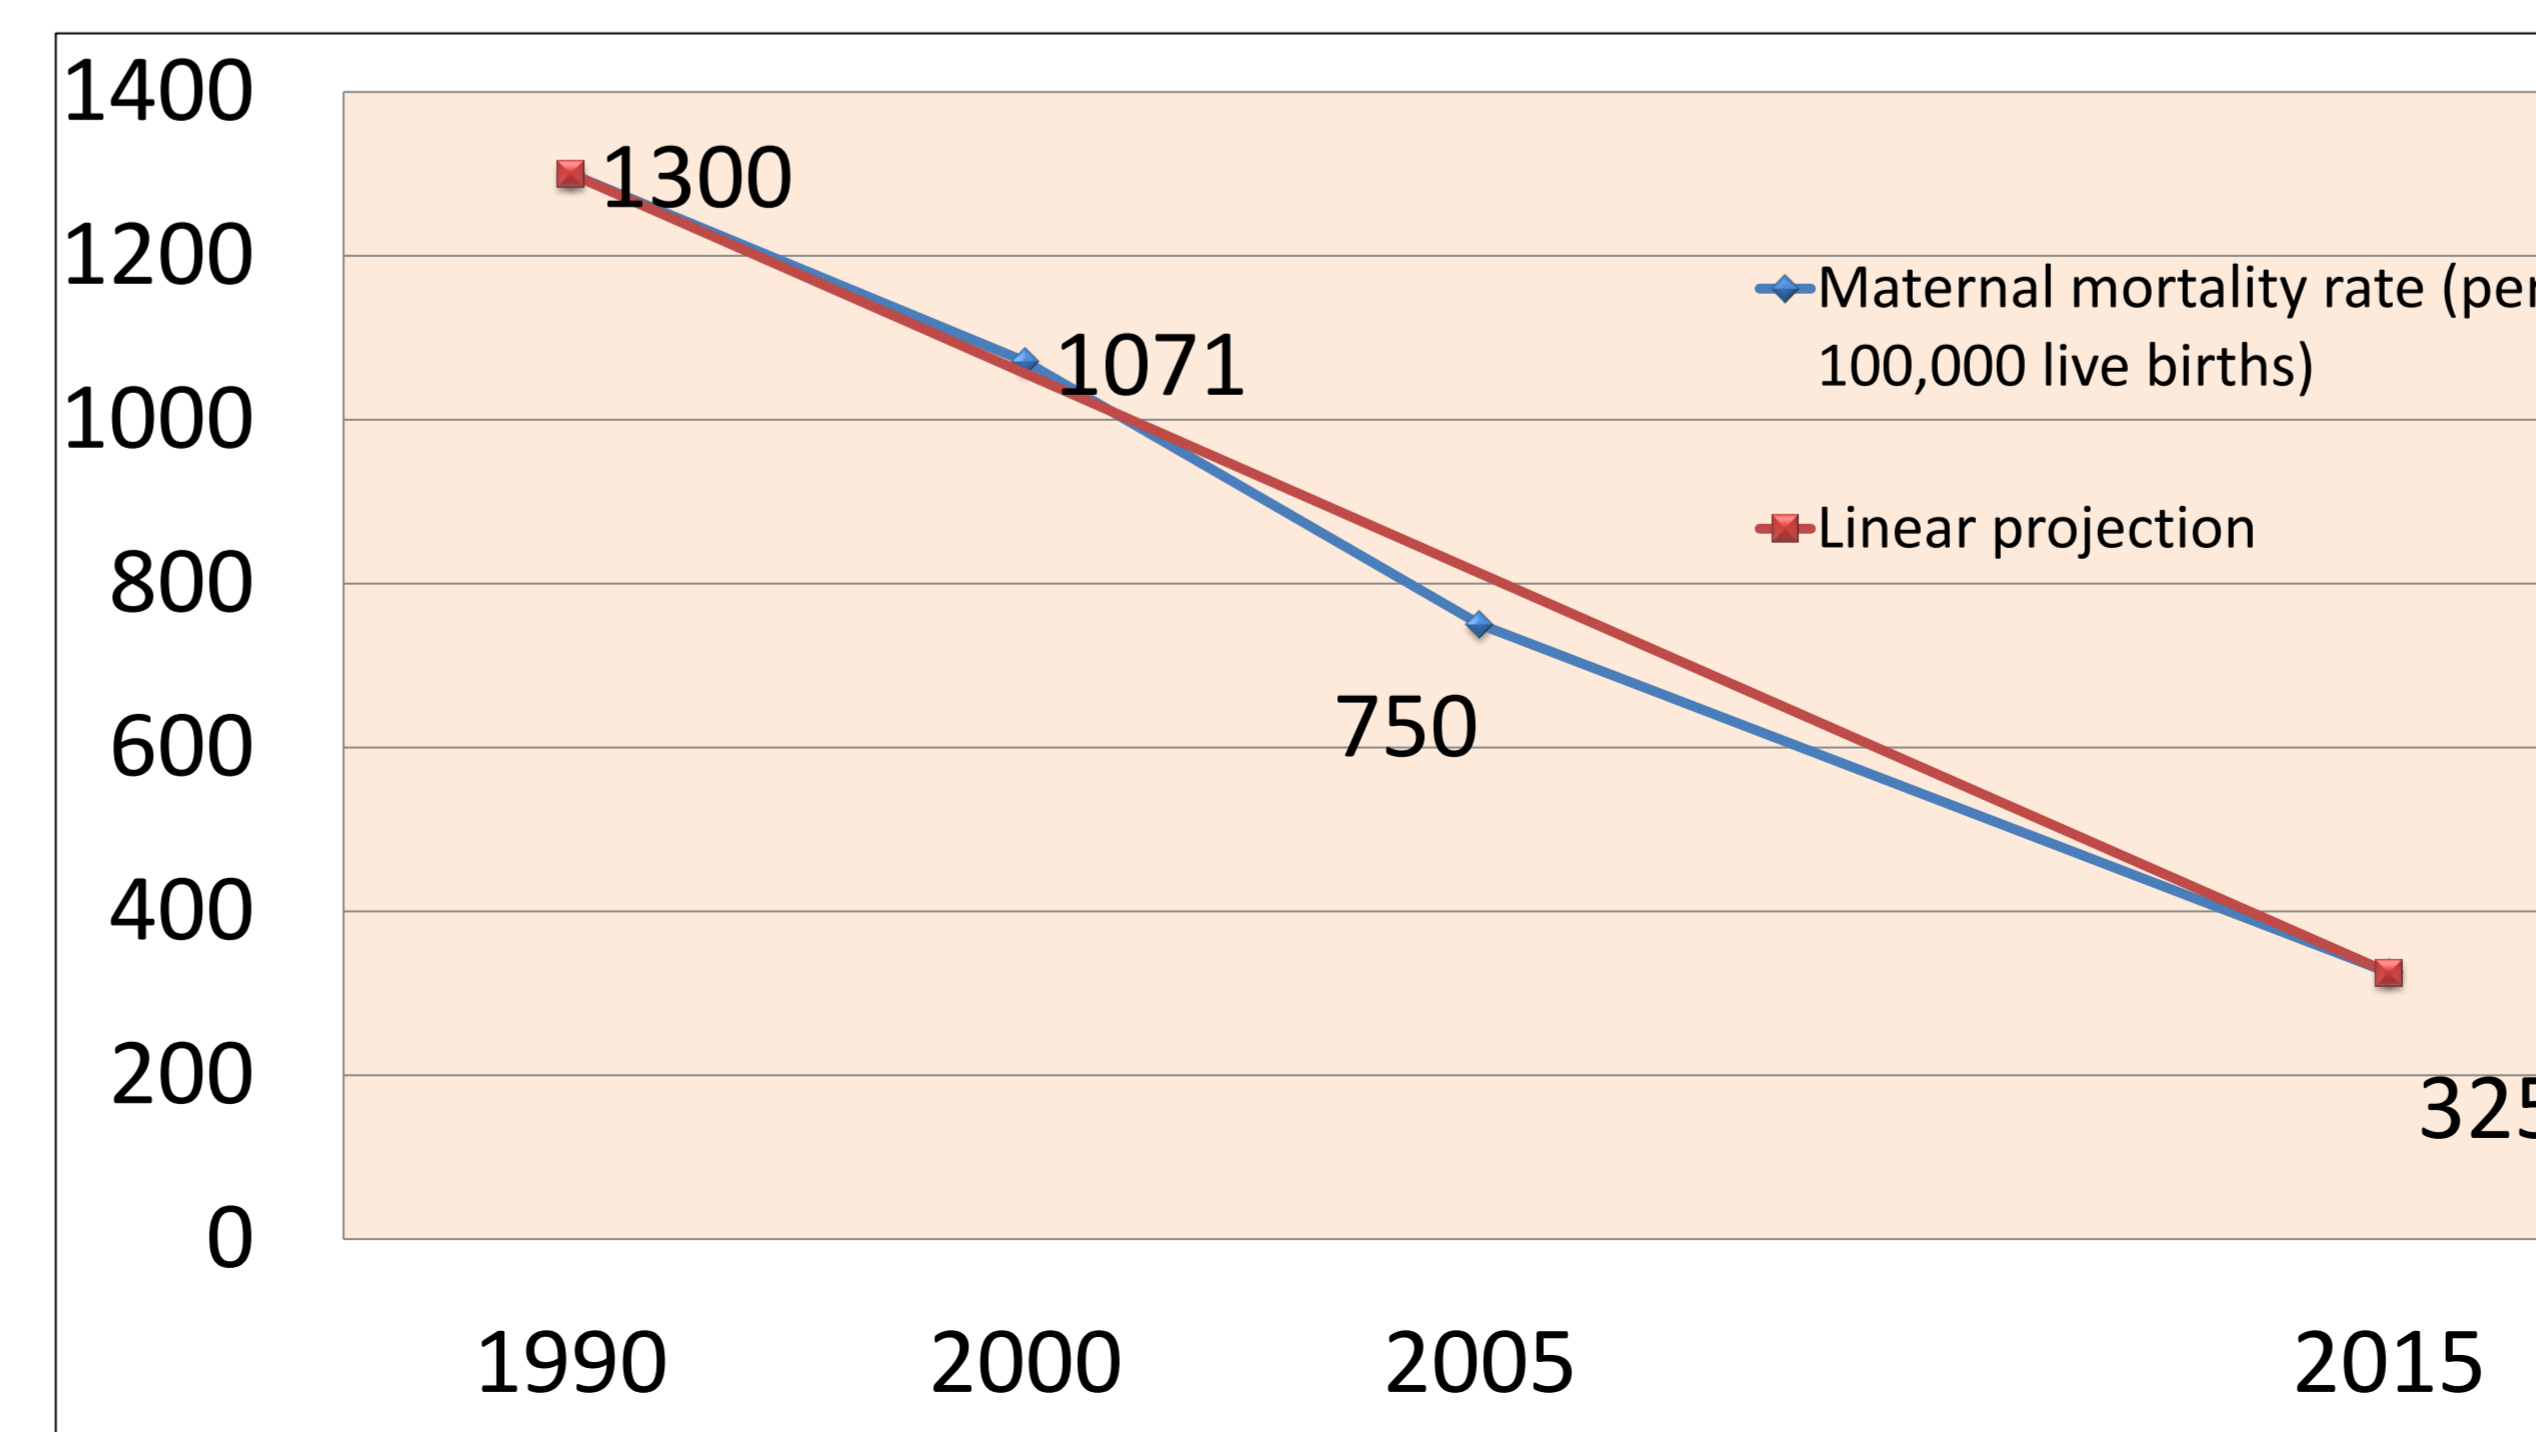

% of Assisted Deliveries

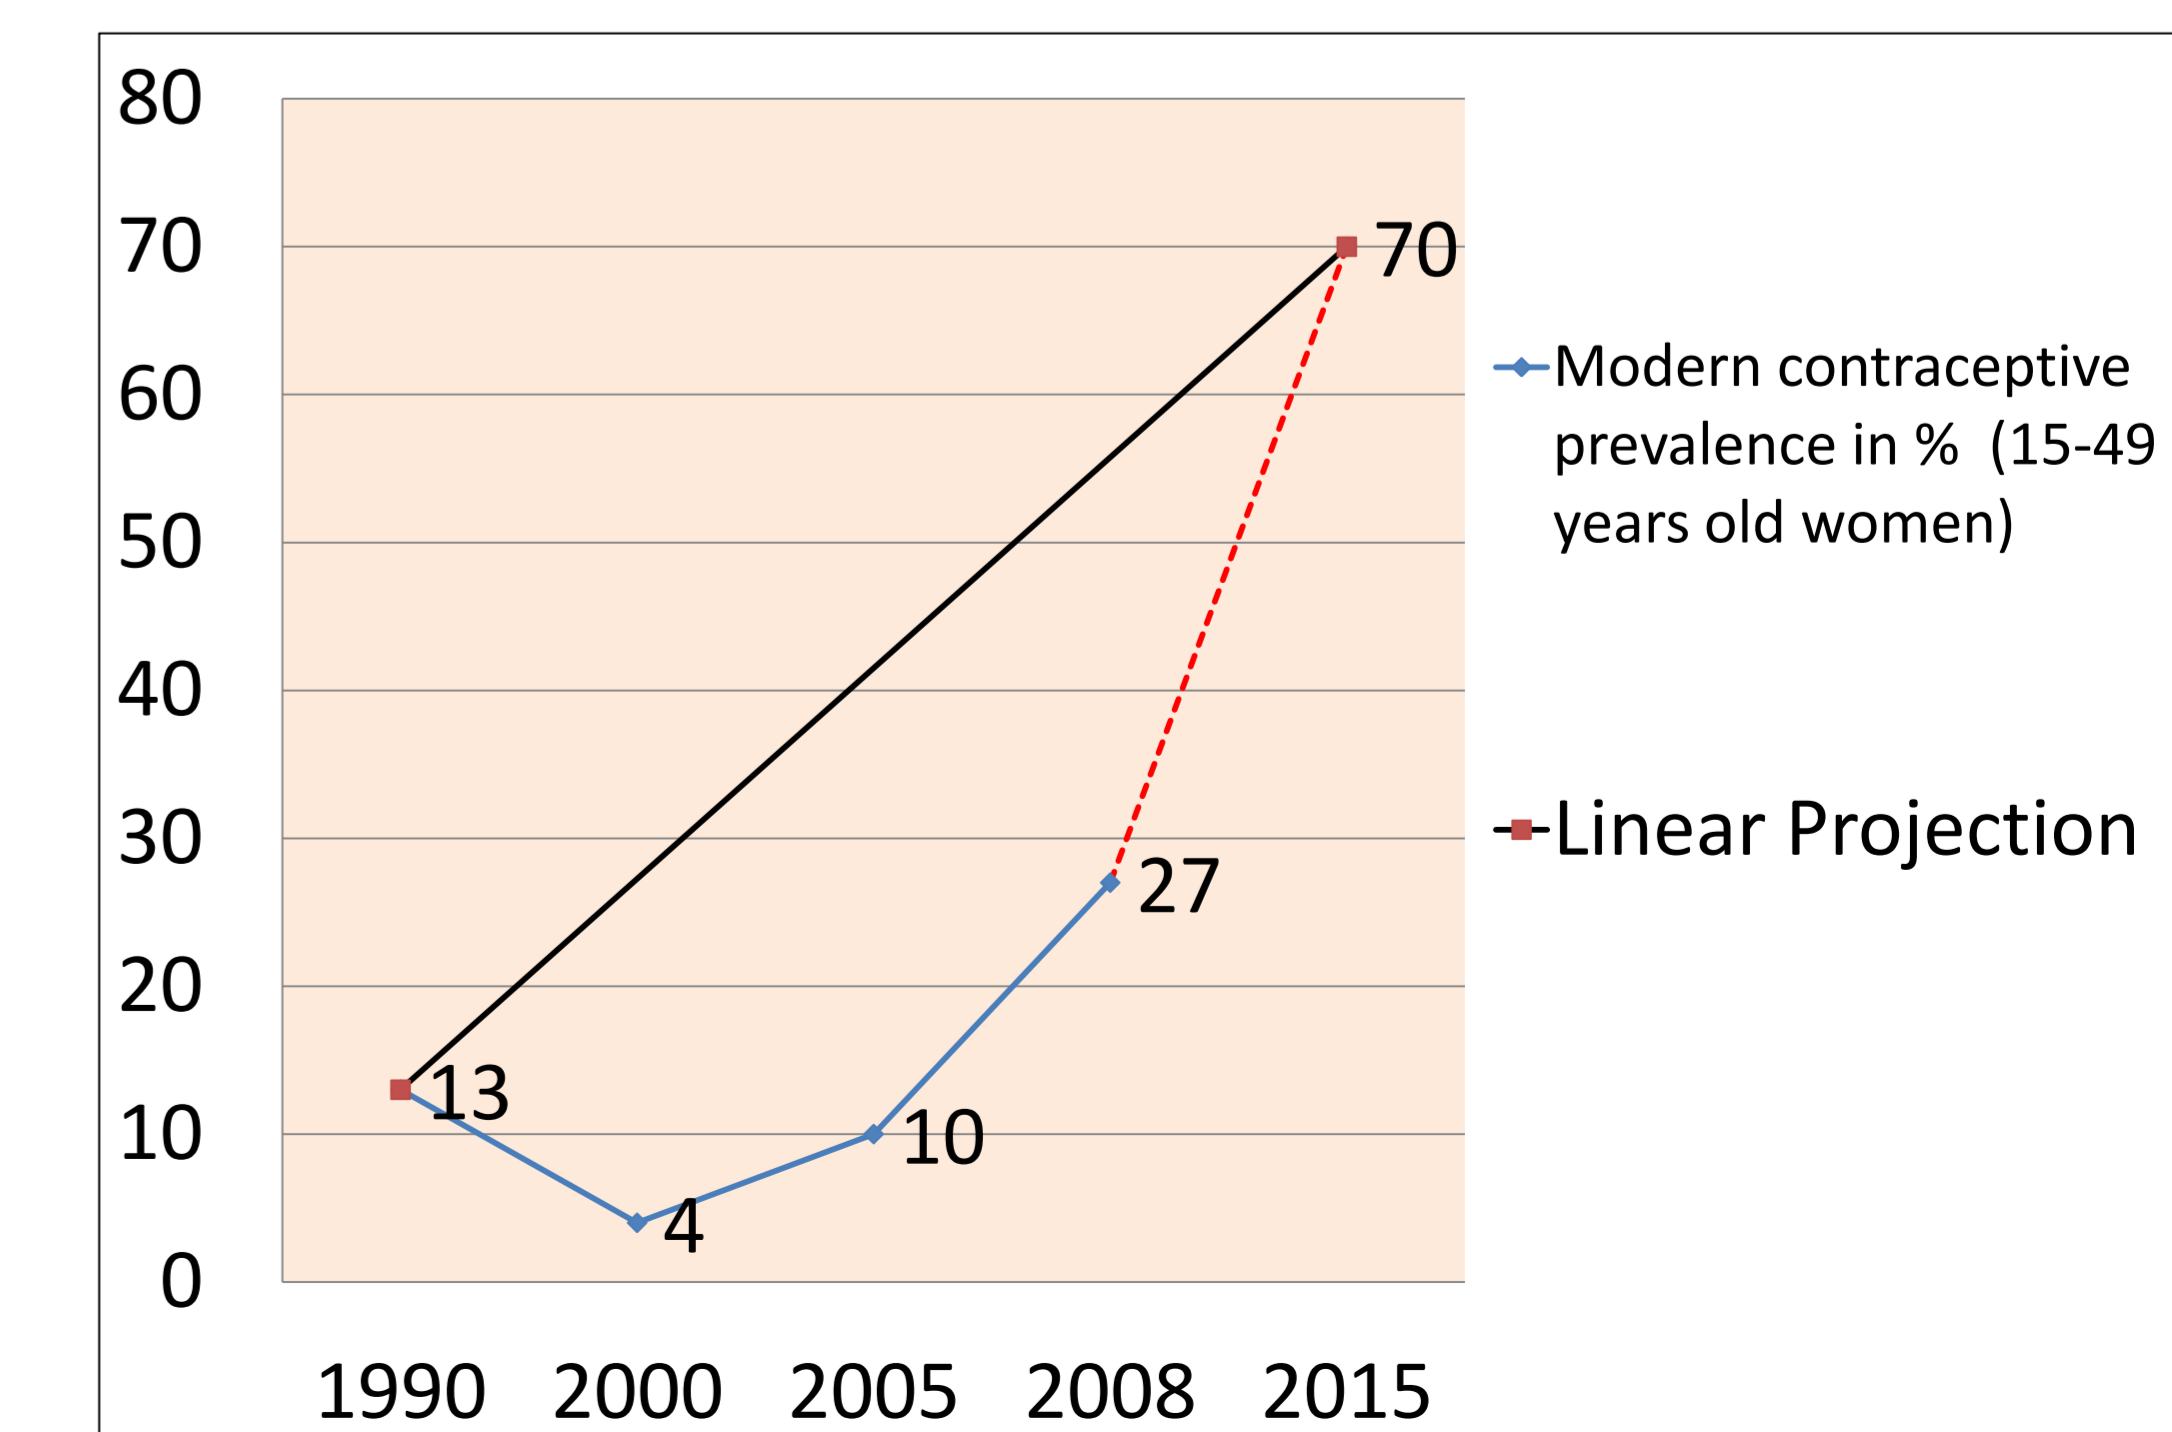

Under 5 Years Mortality Rate per 1000 Live Births

Maternal Mortality Rate

Married Women's Uptake of Modern Contraceptives, Prevalence % 15 – 49 Years
